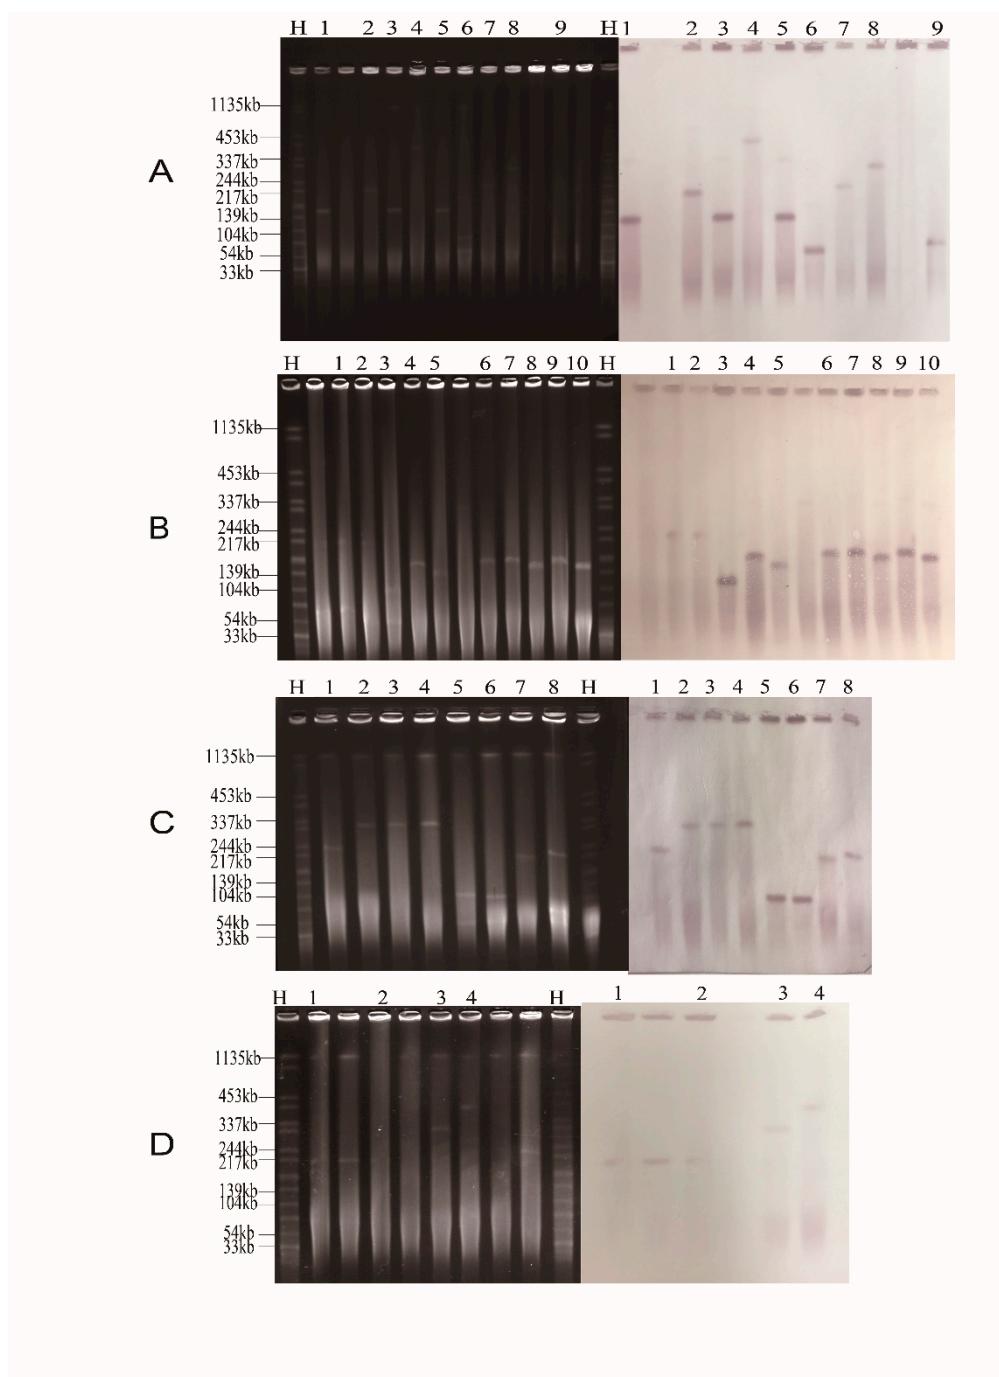

Figure S1. S1-nuclease PFGE mapping and Southern blot analysis of *fosA3*-carrying plasmids on different sizes. A. Strains present in lanes 1 to 9 were B4, E9-1, M6-1, W1-1, B20-2-2, W3-1, Y1-1-1, E15-1, and M1-2, respectively. B. Strains present in Lanes 1 to 10 were E3, W6-2-1, M5-1, B20-1-1, B20-1-2, E4-1, E5, E9-2, W6-2-2, and E4-2-2, respectively. C. Strains presenting Lanes 1 to 8 were X2-3, W2-1, E19-2, E13-2, B17-1-2, E11- 2, B15-2 and E2, respectively. D. Strains present in Lanes 1 to 4 were E6-1, W6-2-1, M4-1, and M1-1, respectively. H, H9812 marker.

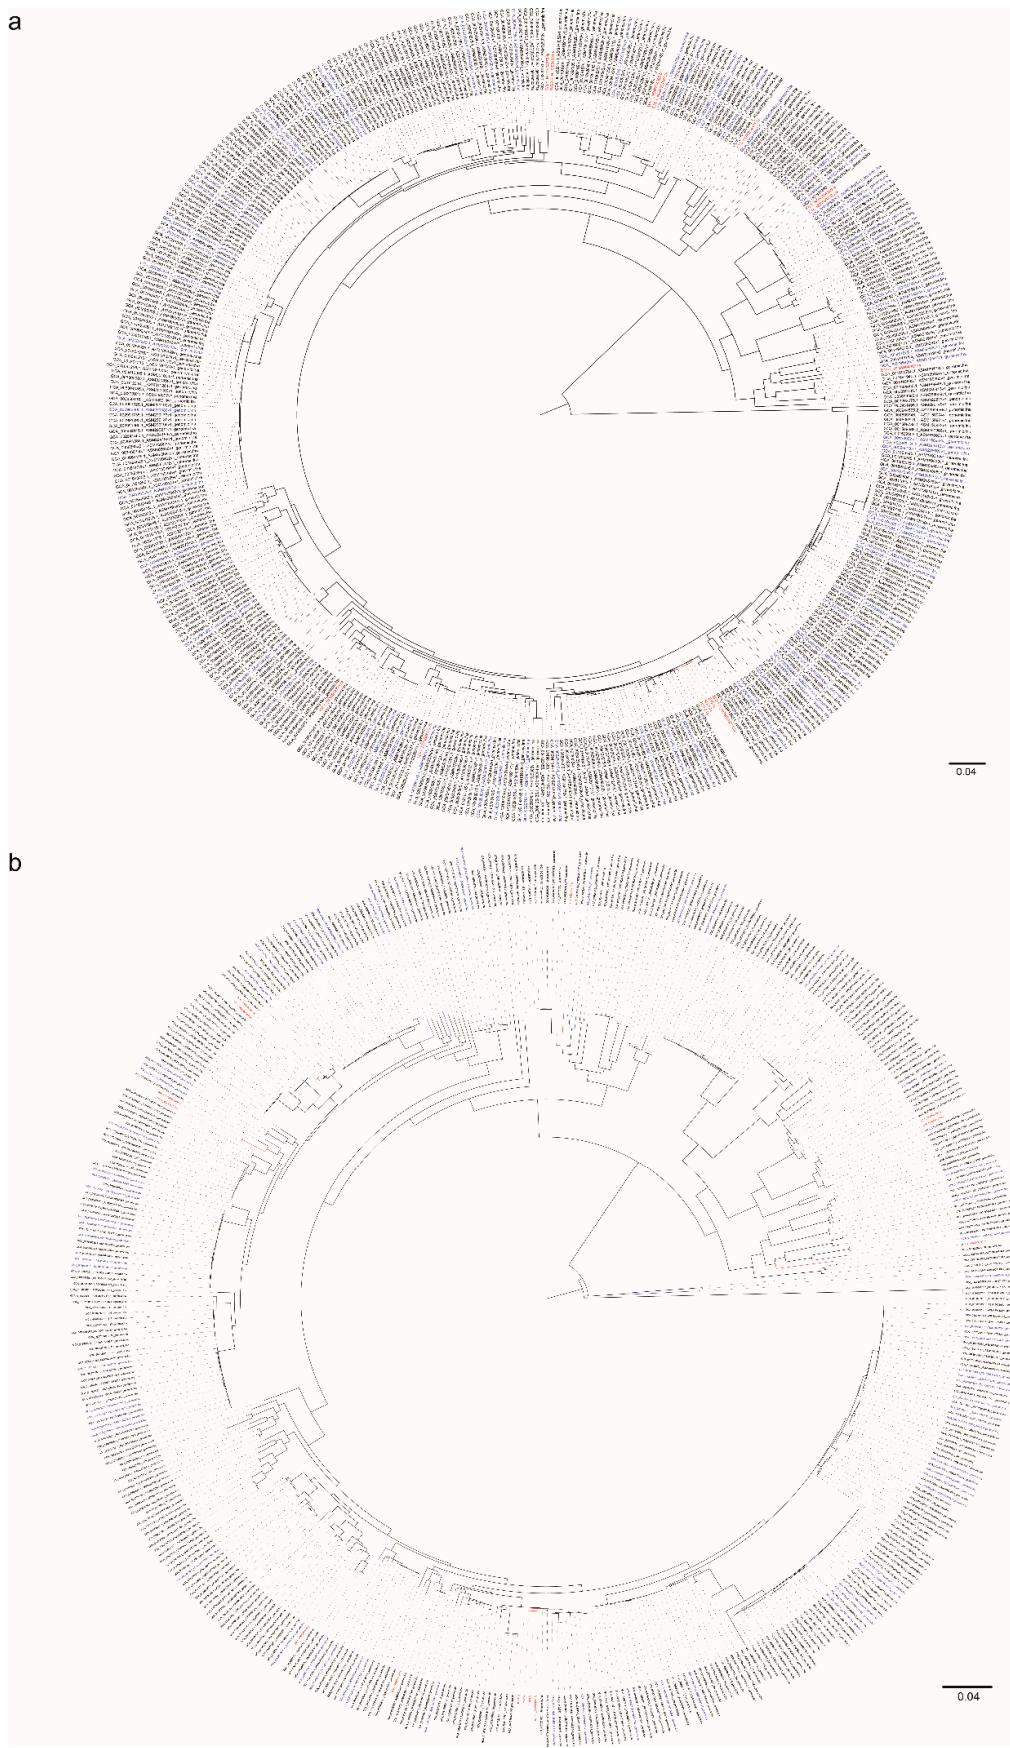

Figure S2. Phylogenetic analysis of the *fosA3* positive *E. coli* from public repository and current study. The 915 *fosA3* positive *E. coli* from public repository were divided into two groups randomly and each group were employed to constructed a phylogenetic tree with the 14 isolates in current study (a and b), respectively. The red clades represent the *fosA3* positive *E. coli* in this study and the blue clades represent the selected 130 representative isolates.

Table S1. Sample collection, strain identification and MIC results.
