Table S1. Results of the SIMPER analysis with the taxa contributing to similarity (a-c) and dissimilarity (b-d) considering active *vs.* inactive vents and shallow *vs.* deep sites for meiofauna, for all taxa (a-b) and only for rare taxa (c-d). Cut-off for low contribution at 60%. Avg. Ab=average abundance; Avg. Sim=average similarity; Contrib %= percentage of variance explained by the explanatory variables; Cum %= cumulative percentage of variance explained by the explanatory variables; Avg. Diss=average dissimilarity.

a)

| Group active shallow | | Av.Sim: 68.86 | | |
|------------------------|----------|---------------|----------|-------|
