

Non-Ionic Osmotic Stress Induces the Biosynthesis of Nodulation Factors and Affects Other Symbiotic Traits in *Sinorhizobium fredii* HH103

Francisco Fuentes-Romero¹, Isamar Moyano-Bravo¹, Paula Ayala-García¹, Miguel Ángel Rodríguez-Carvajal², Francisco Pérez-Montaño¹, Sebastián Acosta-Jurado³, Francisco Javier Ollero¹, José María Vinardell^{1,*}

List of Supplementary Material

Figure S1. β -galactosidase activity of *S. fredii* HH103 carrying plasmid pMP240 upon growth in YM supplemented with different mannitol concentration (from 55 mM to 1 M).

Figure S2. Growth curves of *S. fredii* HH103 in different media supplemented or not with 400 mM mannitol. (A) TY medium; (B) YM medium; (C) Minimal medium (MM); (D) Bromfield medium (BF).

Figure S3. LPS (A) and KPS (B) electrophoretic profiles of *S. fredii* HH103 grown in TY medium in the absence or presence of 400 mM mannitol.

Table S1. Fold-changes, as determined by RNAseq, of the *S. fredii* HH103 *nodABC* genes after 16-h growth in the presence of 400 mM mannitol.

Supplementary Dataset S1. Complete list of Nod factors produced by *Sinorhizobium fredii* HH103 in YM medium in the absence (HH-) or the presence of 3.7 μ M genistein (HH+) or 400 mM mannitol (HH mannitol).

Supplementary Dataset S2. *S. fredii* HH103 DEGs upon growth in 400 mM mannitol ordered by fold-change.

Supplementary Dataset S3. List of *S. fredii* HH103 induced genes in the presence of 400 mM mannitol, ordered by replicon.

Supplementary Dataset S4. List of the different AHLs detected as produced by *S. fredii* HH103 grown in the absence (269) or presence (269_Manitol) of 400 mM mannitol.

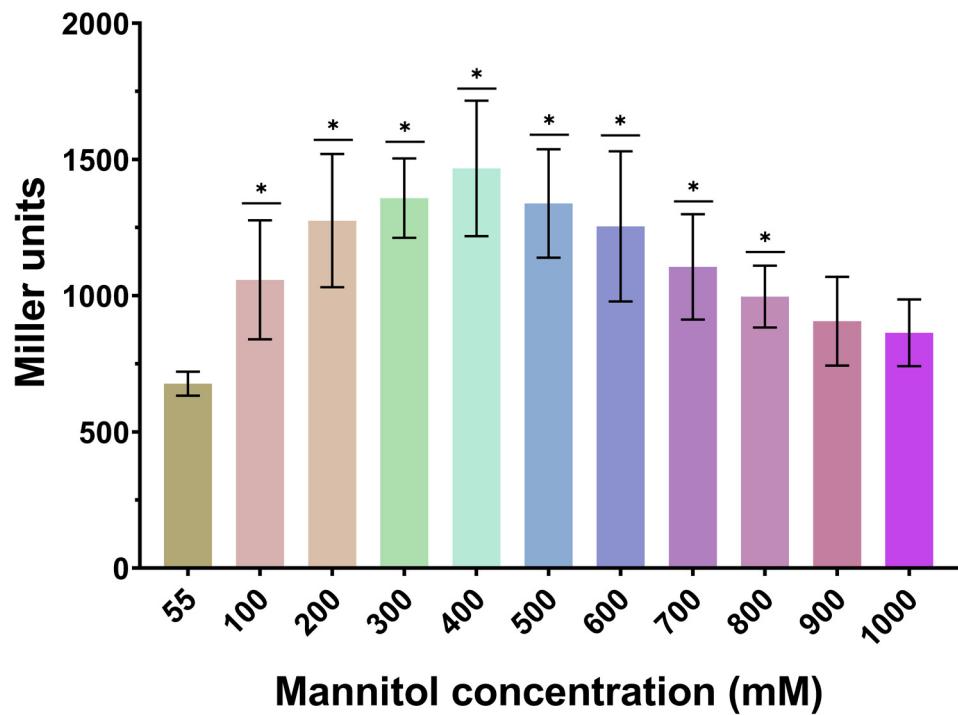

Figure S1. β -galactosidase activity of *S. fredii* HH103 carrying plasmid pMP240 upon growth in YM supplemented with different mannitol concentration (from 55 mM to 1 M). Asterisks (*) indicate significant differences with the corresponding control sample using the non-parametric test of Mann–Whitney, $\alpha = 5\%$.

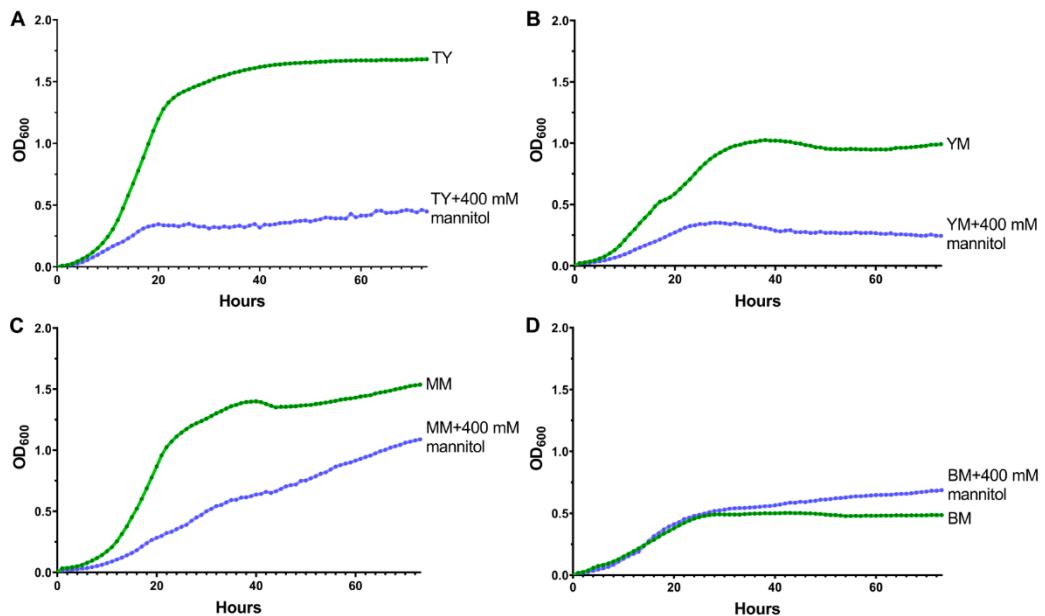

Figure S2. Growth curves of *S. fredii* HH103 in different media supplemented or not with 400 mM mannitol. (A) TY medium; (B) YM medium; (C) Minimal medium (MM); (D) Bromfield medium (BF).

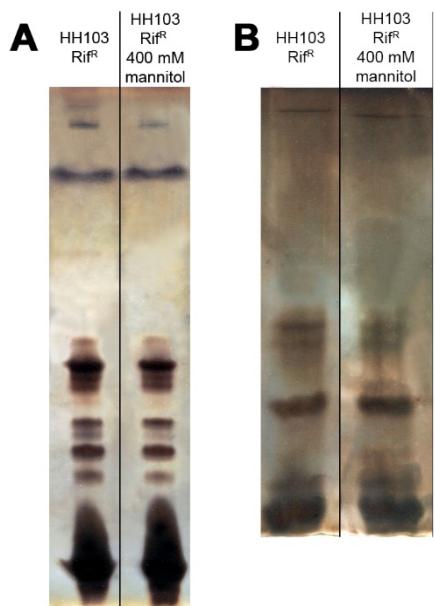

Figure S3. LPS (A) and KPS (B) electrophoretic profiles of *S. fredii* HH103 grown in TY medium in the absence or presence of 400 mM mannitol.

Table S1. Fold-changes, as determined by RNAseq, of the *S. fredii* HH103 *nodABC* genes after 16-h growth in the presence of 400 mM mannitol.
