

Supplementary Materials

DNA Extraction

Soils (0.6–1.0 g) were aseptically measured into 1.5 mL screw-cap polypropylene tubes containing 0.5 g each of 0.1 and 2.5 mm zirconia/silica beads (BioSpec Products Inc, Bartlesville, OK, USA). Beads were baked at 250 °C for 4 h prior to use. 300 µL phosphate buffer (100 mM NaH₂PO₄) and 300 µL Sodium Dodecyl Sulfate (SDS) lysis buffer (100 mM NaCl, 500 mM Tris pH 8.0, and 10% SDS) were added. This was shaken at 4.2 ms⁻¹ for 30 s on a MiniBeadBeater (Glen Mills Inc, Clifton, NJ, USA), mixed on a Vortex Genie (MO BIO Laboratories, Inc. Carlsbad, CA, USA) for 10 min and centrifuged at 16100 RCF for 3 min. The supernatant was transferred to a new tube containing 200 µL hexadecyltrimethylammonium bromide (CTAB) buffer (100 mM Tris-HCl pH 8.0, 1.4 M NaCl, 25 mM EDTA, 2% CTAB, 1% polyvinylpyrrolidone, 0.04% v/v β-mercapto-ethanol) and incubated at 300 rpm 60 °C for 30 min in a Thermomixer Comfort (Eppendorf, Hamburg, Germany). The upper aqueous layer was removed to a new 1.5 mL sterile Eppendorf tube and an equal volume of chloroform:isomyl alcohol was added, vortexed for 10 s and left on a rocking bed for 20 min at room temperature. Afterwards it was pelleted by 5 min centrifugation at 16100 RCF. The aqueous fraction was removed to a new tube. DNA was precipitated with 7 M ammonium acetate to a final concentration of 2.5 M, mixed by repeated inversion and centrifuged for 5 min at 16100 RCF. The upper aqueous layer was transferred to a new sterile 1.7 mL Eppendorf tube and 0.54 volume of isopropanol was added, mixed by repeated inversion, and incubated at -20 °C overnight. The tubes were centrifuged at 16100 RCF for 20 min, the supernatant was discarded and the pellet was washed with 1 mL of ice-cold ethanol (-20 °C) and centrifuged at 16100 RCF for 30 s. The supernatant was discarded and the pellet was dried in a SpeedVac concentrator (BioLab, Dublin, OH, USA) on manual and a medium temperature. DNA was resuspended in 20 µL sterile LO-TE (3 mM Tris-HCl pH 8, 0.2 mM EDTA), and its concentration quantified using the Qubit-IT ds-DNA HS Assay Kit (Invitrogen, Carlsbad, CA, USA) and stored at -80 °C till use. Procedural blanks were included at appropriate steps and yielded no DNA detectable by PCR.

Table S1. An overview of primers used for tRFLP and 454 pyrosequencing. For sequencing, 2 sets of primers were used, ITS1-F (forward primer) and ITS4 (reverse primer) were used in the first round of PCR, and fusion primer versions of these primers (*i.e.*, with 454 sequencing adapter and barcode added) in the second round.

Name	Sequence	Analysis
ITS1-F	5'-FEM-CTTGGTCATTTAGAGGAAGTAA-3'	tRFLP
3126R	5'-ATATGCTTAAGTTCAGCGGGT-3'	tRFLP
ITS1-F	5'-CTTGGTCATTTAGAGGAAGTAA-3'	454 Pyrosequencing—1st PCR
ITS4	5'-TCCTCCGCTTATTGATATGC-3'	454 Pyrosequencing—1st PCR
UoW1_ITS1F	5'-CCATCTCATCCCTGCGTGTCTCCGACTCA GCGAGTCTTGGTCATTTAGAGAAGTAA-3'	454 Pyrosequencing—2nd PCR
UoW3_ITS1F	5'-ATCTCATCCCTGCGTGTCTCCGACTCAGA CGATACGCTTGGTCATTTAGAGGAAGTAA-3'	454 Pyrosequencing—2nd PCR
UoW4_ITS1F	5'-CATCTCATCCCTGCGTGTCTCCGACTCA GCTGACCTTGGTCATTTAGAGGAAGTAA-3'	454 Pyrosequencing—2nd PCR
UoW12_ITS1F	5'-ATCTCATCCCTGCGTGTCTCCGACTCAGC AGTACGCTTGGTCATTTAGAGGAAGTAA-3'	454 Pyrosequencing—2nd PCR
UoW_ITS4	5'-CTATCCCCTGTGTGCCTTGGCAGTCTCAGTC CTCCGCTTAT-3'	454 Pyrosequencing—2nd PCR

Table S2. Soil geochemical properties (S.D. in parentheses).

	Miers Valley	Beacon Valley	Battleship Promontory	Upper Wright Valley	Alatna Valley	University Valley
Clay: 0.06–2 µm (%)	0.02 (0.01)	2.42 (1.05)	0.82 (0.72)	6.43 (2.83)	0.13 (0.09)	2.18 (0.85)

All values were calculated from five sampling points from each valley (except for gravimetric water content, where only sampling points A and C were measured for Miers, Beacon, Upper Wright Valley and Battleship Promontory). Elemental concentrations are in ppm unless otherwise noted.

Table S3. Results from BEST analysis.

Correlation Coefficient (Rho)	Variables
