FC: Fold changes (Cd vs control; GSH vs Cd) in $\log_2 N$, $\log_2 N \geq 1$ are increased, $0 < |\log_2 N| < 1$ are unchanged and $\log_2 N \leq -1$ are decreased. CdL, Cd treatment vs control in leaves; CdR, Cd treatment vs control in roots; GSHL, exogenous GSH and Cd treatment vs Cd treatment in leaves; and GSHR, exogenous GSH and Cd treatment vs Cd treatment in roots. Cd treatment (5 μM CdCl_2), exogenous GSH (30 μM GSH).
