\* Correspondence: alexandru.nicolae@unibuc.ro

**Abstract:** This paper focuses on Istro-Romanian and argues that the TAM auxiliaries of this variety are not morphophonological clitics. This analysis is supported by the existence of several empirical phenomena (auxiliary-licensed VP-ellipsis, scrambling, and interpolation), some not found in modern Romance, others very rare in modern Romance. This property of Istro-Romanian auxiliary verbs accounts, in conjunction with other features of this variety (e.g., the availability of C-oriented and I-oriented pronominal clitics), for the massive variation in the word order of pronominal clitics, auxiliaries, and the lexical verb found in the Istro-Romanian sentential core. An endangered Romance variety spoken in Istria and in the diaspora, historically related to (Daco-)Romanian, Istro-Romanian has been in contact with Croatian since the settlement of Istro-Romanians in the Istrian peninsula. As some of the Istro-Romanian features and phenomena are found both in Croatian and in old Romanian, it appears that contact with Croatian acts as a catalyst of structural convergence engendering the retention of an archaic property of Istro-Romanian auxiliaries: a lower position on the grammaticalization cline, closer to the full word status of their etyma.

## 1. Introduction

### 1.1. Background

Istro-Romanian is an endangered Romance variety spoken in Istria, Croatia, with about 200 speakers at present (cf. [Filipi 2002](#); [Vrzić and Doričić 2014](#)), plus émigré speakers in the New York area ([Maiden 2016](#), p. 91). Traditionally considered to be one of the sub-Danubian “historical dialects” of Romanian (alongside Aromanian and Megleno-Romanian), Istro-Romanian<sup>1</sup> displays two tendencies in its syntax: (i) on the one hand, Istro-Romanian displays a series of Romance archaic features, also found in old Romanian (which have been taken to mirror the shape of the language at the moment of the dialectal split, presumed to have finished around the 14th century); (ii) on the other, we observe the influence on the syntax of Istro-Romanian of Croatian<sup>2</sup> (see [Kovačec 1966, 1968](#)) and, to a much more limited extent, of Northern Italian dialects, Croatian–Istro-Romanian bilingualism being the norm in the area. While a comprehensive grammar/syntax of Istro-Romanian is not available at present, there exist partial descriptions of this linguistic dialect ([Popovici 1914](#); [Pușcariu 1926](#); [Coteanu 1957](#); [Kovačec 1971, 1984, 1998](#); [Caragiu Marioțeanu 1975](#); [Sârbu and Frătilă 1998](#); [Hurren 1999](#); [Zegrean 2012](#); [Giusti and Zegrean 2015](#); [Maiden 2016](#)) which offer significant details and insights into its structure. It is also important to mention that ‘old Romanian’ refers to the timespan comprised between the beginning of the 16th c. and the year 1780; the first written attestations of Romanian date back to the beginning of the 16th c.: *Neacșu’s Letter* (1521), the first non-translated text written in Romanian, and *The Hurmuzaki Book of Psalms* (1500/1510), the first translation of a foreign (Old Church Slavonic) text in Romanian. See [Timotin \(2016\)](#) for more details on

the periodization of Romanian. Notably, the dialectal split took place prior to the earliest written attestations of Romanian.

### 1.2. Aim of the Paper and Methodology

The verbal nexus of Istro-Romanian is characterized by massive variation, displaying numerous distinct word order patterns of pronominal clitics, auxiliaries, and the lexical verb—all of them found across Romance, but not at the same time in the same variety. Furthermore, Istro-Romanian also shows instances of auxiliary-licensed verbal ellipsis (=VP-ellipsis), a phenomenon severely restricted in the Romance languages (see [Nicolae 2019a](#): ch. IV for an overview). By using a standard minimalist generative grammar framework (see Section 1.3 below) and by working with the existing written corpora of Istro-Romanian<sup>3</sup>, we aim to demonstrate that the paradoxical properties briefly mentioned above (as well as many others, discussed throughout the paper) are best understood under the premises that Istro-Romanian auxiliaries are not clitics (see also [Geană 2017](#)). Therefore, in contrast to the auxiliaries of Daco-Romanian, Istro-Romanian auxiliaries are less grammaticalized (closer to full words on the [Hopper and Traugott's \(2003\)](#) ‘grammaticalization cline’), and this morphophonological property has syntactic relevance. The non-clitic nature of Istro-Romanian auxiliaries will be shown to result from the combined effect of the conservative nature of this idiom (=retention of an archaic feature from an unattested stage of (proto-)Romanian) and language contact with Croatian<sup>4</sup>.

### 1.3. Conceptual Tools

In what follows, we adopt the current generative view on clause structure (1), according to which finite clauses are made up of three domains: the CP-domain, the IP(/TP)-domain and the *v*P-domain(/*v*-VoiceP)-domain. Research in this area has revealed that, cross-linguistically, any of the three domains can be targeted by V-raising/movement. It is well-known that these domains themselves are made up of a relevant number of projections—cf., for example, [Rizzi's \(1997\)](#) split-CP analysis or [Cinque's \(1999\)](#) cartographic approach; finer-grained structural details will be provided when necessary.

1.	<b>CP</b> (continental) Germanic V2 old Romance V2	>	<b>IP</b> modern Romance	>	<b><i>v</i>P</b> English
----	--	---	-----------------------------	---	-----------------------------

It is also necessary to introduce some minimal background on the phenomena relevant for our argumentation.

Consider first auxiliary-licensed VP-ellipsis; the main properties of this phenomenon<sup>5</sup>—which occurs rather rarely cross-linguistically (it productively occurs in English)—are the following:

- it is a type of elliptical construction which is dependent on the existence of a licenser (a TAM auxiliary or a modal auxiliary);
- it is insensitive to clause type (main/embedded clause) and other conditions (e.g., in contrast to ellipses such as gapping, it is not parasitic on coordination);
- there are two conditions which need to be met for the licensing of this type of ellipsis (see [Thoms 2010](#); [Authier 2012](#), i.a.):
  - (i) lower verb movement of the lexical verb (movement below I);
  - (ii) non-clitic auxiliary verbs.

Secondly, a minimal background on verb morphosyntax in (Daco-)Romanian is also necessary; this provides a starting point for understanding the Istro-Romanian data. Up to the present point, research on old and modern (Daco-)Romanian has established the following:

- modern Romanian auxiliaries are clitics ([Avram 1999](#)); the same characteristic carries over to old Romanian too ([Nicolae 2019b](#));

- modern Romanian synthetic finite verbs are characterized by V-to-I movement (Dobrovie-Sorin 1994; Cornilescu 2000; Ledgeway 2015, i.a.);
  - in a framework that assumes a finer-grained cartographic structure of the IP in the tradition of Cinque (1999) (distinguishing a Mood field, a Tense field, and an Aspect field), synthetic finite verbs raise to the top-most I-field, Mood (Nicolae 2015; Schifano 2018);
  - in periphrastic constructions, both the auxiliary /auxiliaries and the lexical verb reside in the IP-domain (Alboiu and Motapanyane 2000; Nicolae 2015);
- V-to-C movement is restricted to imperatives, conditional imprecations, and gerunds in modern Romanian—and it always takes the shape of Rivero’s (1992, 1994) Balkan ‘Long Head Movement’ (=LHM) rule, by which it is the lexical verb, not the auxiliary that moves to C;
- although statistically V-to-I movement is the dominant option (Nicolae 2015), V-to-C movement is more widespread in old Romanian (also occurring in finite non-imperative clauses), and (English-type) low(er) verb movement (on the surface manifested as scrambling and interpolation) is also found in old Romanian finite clauses (Nicolae 2019b);
- pronominal clitics are I-oriented in both old and modern Romanian (cf. Săvescu Ciuci-*vara* 2011; Hill and Alboiu 2016, i.a.)<sup>6</sup>, and occupy dedicated projections at the edge of the IP-domain; in correlation with other syntactic diagnostics, the proclisis/enclisis alternation is relevant for assessing the level of verb movement (V-to-I/V-to-C).

Some terminological clarifications are also necessary.

- *Interpolation* represents the separation of the clitic pronoun from the finite verb by (an) intervening XP(s), while *scrambling* refers to the separation of the auxiliary verb from the lexical verb by (an) intervening XP(s). It has been shown that in the Romance languages multiple processes may lie behind the derivation of interpolation and scrambling; thus, while on the surface, each of these phenomena, in its own right, may appear to be a unified phenomenon, from a structural point of view, they are based on different processes (see also Poole 2007, p. 188, n. 1, who makes similar comments in the analysis of old Spanish). Hence, in what follows, we use the terms *interpolation* and *scrambling* to refer to the word order patterns described above; their structural analysis is assessed on the basis of syntactic diagnostics for each of the varieties examined here (Istro-Romanian, old Romanian, and Croatian).
- We use the label ‘Long Head Movement’ (LHM) (Rivero 1992, 1994) conventionally, to describe an empirical phenomenon specific (but not limited) to the Balkan languages: the displacement of a non-finite lexical verb across the auxiliary. Technical details on the derivation of LHM structures will be provided below.

In what follows, we set out to bring evidence for the main claim of the paper, namely that Istro-Romanian auxiliaries are not clitics. Viewed from a diachronic, Latin-to-Romance perspective, this property translates as the preservation of a more archaic status of Istro-Romanian auxiliaries: while these verbs become functional elements showing the typical phenomena of auxiliation—(morpho)phonological reduction (in comparison to their etyma), loss of thematic structure, loss of morphosyntactic features (see, i.a., Roberts and Roussou 2003, ch. 3; Ledgeway 2016, p. 768)—from the perspective of Hopper and Traugott’s (2003) grammaticalization cline, their status is that of full words (neither clitics, nor affixes). We argue that contact with Croatian acts as a catalyst of structural convergence engendering the retention of an archaic feature. As will be seen, the hypothesis that this is an archaic feature is supported by old Romanian data, as early old Romanian shows a few clear instances of auxiliary-licensed VP-ellipsis and related phenomena (interpolation and scrambling).

## 2. Three Phenomena Showing the Non-Clitic Nature of Istro-Romanian Auxiliaries

### 2.1. Auxiliary-Licensed VP-Ellipsis

The availability of VP-ellipsis in Istro-Romanian is a phenomenon which has not been discussed in the literature (Zegrean 2012, p. 122 briefly mentions it). From a comparative Romance perspective, this feature of Istro-Romanian is unexpected: in contrast to the other Romance languages, Istro-Romanian auxiliary-licensed VP-ellipsis brings this idiom closer to languages such as English. The following data, extracted from the corpora<sup>7</sup>, show that the phenomenon is frequent. In what follows, we present the distribution of auxiliary-licensed VP-ellipsis in Istro-Romanian.

(i) The auxiliary licenses ellipsis in main clauses. Ellipsis is found with the perfect auxiliary (2a–e), the future auxiliary (2f), and the conditional auxiliary (2g,h). The symbol ✓ marks the ellipsis site; in situations in which the antecedent is not immediately obvious from the immediate context, it is represented in brackets < >.

- |       |  |  |                                 |   |

- f. - Grofu av urdineit che io me mores  
 count have-AUX.PERF.3SG order-PTCP that I CL.REFL.1SG have.to  
 ănsura c-alui ( . . . ) fil'e, e io sãm ănsurat; nu  
 marry with-his daughter and I am marry-PTCP not  
 poc. Ver ✓ te tu,  
 can-IND.PRES.1SG will-AUX.FUT.2SG CL.ACC.2SG you-SG  
 oucearule?  
 shepherd-VOC  
 - Io voi ✓, io! (LM, 123)  
 I will-AUX.FUT.1SG I  
 'The count ordered that I have to marry his daughter, but I am married; I can't. Will you, shepherd?/- I will.'
- g. Ke l'a zís -re i  
 that CL.ACC.3SG=have-AUX.PERF.3SG say-PTCP would-  
 te tu maritã dupa mire? AUX.COND.2SG  
 CL.REFL.2SG you-SG marry-INF after me  
 ăa zîce:  
 she says  
 - Reş ✓. (AK, 338)  
 would-AUX.COND.1SG  
 'and he said—would you marry me? She says: - I would.'
- h. - Rei borebit pocini?  
 would-AUX.COND.2SG maybe rest-INF  
 - Reş ✓. (TC, 57)  
 would-AUX.COND.1SG  
 '— Would you rest?/- I would.'

(ii) The auxiliary licenses ellipsis in embedded clauses. In our corpus survey, we have identified the perfect auxiliary (3a) and the future auxiliary (3b) in these contexts.

3. a. - Cuheit-ăi?  
 cook-PTCP=have-AUX.PERF.2SG  
 Ie zis-a che a ✓, ma  
 he say-PTCP=have-AUX.PERF.3SG that have-AUX.PERF.3SG but  
 c-a zadurmit și  
 that=have-AUX.PERF.3SG fell.asleep-PTCP and  
 nușcarle . . . (TC, 71)  
 someone  
 'Did you cook?/He said that he had, but he fell asleep and someone . . . '
- b. Zis-au cela tireru che va ✓  
 say-PTCP=have-AUX.PERF.3SG that young.DEF that will-AUX.FUT.3SG  
 <insura> (LM, 137)  
 marry  
 'The young one said that he would <get married>.'

(iii) Auxiliary-licensed VP-ellipsis is also available in negative clauses:

4. a. - Vezi, tu-i zadurmit.  
 see-IND.PRES.2SG you-2SG=have-  
 AUX.PERF.2SG fall.asleep-PTCP  
 - Nu ūam ✓. (TC, 36)  
 NEG have-AUX.PERF.1SG  
 ‘- See, you fell asleep./- No, I did not.’
- b. Ma ur fost-a ănsurat, e ur  
 but one be-PTCP=have- marry- and one  
 AUX.PERF.3SG PTCP  
 n-av ✓. (LM, 77)  
 not=have-AUX.PERF.3SG  
 ‘But one got married, and the other did not.’

(iv) In other cases (5), the auxiliary licenser is also followed by remnants:

5. a. - Cum ūai sta noapte durmit?  
 how have-AUX.PERF.2SG this night sleep-PTCP  
 - Ūam ✓ bire. (TC, 57)  
 have-AUX.PERF.1SG well  
 ‘- How did you sleep last night?/- I did <sleep> well.’
- b. Se-i tu utat,  
 if=have-AUX.PERF.2SG you-2SG forget-PTCP  
 n-ūam ✓ io. (TC, 39)  
 not=have-AUX.PERF.1SG me  
 ‘Even if you have forgotten, I have not.’
- c. Ali ia cunoscut-a ie. **Ie**  
 but she recognize.PTCP=have-AUX.PERF.3SG him **ia**  
 he  
 her  
 n-av ✓. (TC, 45)  
 not=have-AUX.PERF.3SG  
 ‘She recognized him, but he did not <recognize> her.’

The features in (i)–(iv) show that the auxiliary-licensed VP-ellipsis in Istro-Romanian has the same properties as its English counterpart (see Section 1.3 above).

## 2.2. Discontiguous Verbal Clusters as Evidence for Low Verb Movement

In previous work, we have brought evidence in favour of the hypothesis that, in contrast to modern Daco-Romanian, Istro-Romanian shows numerous instances of low verb movement (Dragomirescu and Nicolae 2018). Low(er) verb movement is also found in old Romanian (Nicolae 2019b) (see also Section 3.2.1 below). The tools for diagnosing low(er) verb movement are the diagnostic adverbs for V-movement (Section 2.2.1) in Cinque’s (1999) hierarchy (see Schifano 2018 for an update and revised hierarchy) and other patterns of discontiguity in the verbal cluster—scrambling for periphrastic structures and interpolation for synthetic structures (Section 2.2.2).

The existence of low(er) verb movement is directly relevant to our argumentation: it is a property which directly correlates with the availability of auxiliary-licensed VP-ellipsis, which, in its turn, acts in correlation with non-clitic auxiliaries.

### 2.2.1. Scrambled and Interpolated Adverbs

The most significant argument for low verb movement is the position of Cinque’s diagnostic adverbs for V-movement. In particular, we observe that the lexical verb occurs to the right of the adverbs ‘well’, ‘already’, ‘then’ (6a–e), themselves preceded by the auxiliary; it is well known that these adverbs lexicalize various specifiers in Cinque’s (1999) hierarchy: ‘well’ marks the boundary between the IP-domain and the *v*P-domain, ‘already’ and ‘then’ are T-oriented adverbs. Other (circumstantial) adverbs (6f–g) may also occur in between the auxiliary and the lexical verb.

6. a. **Âm** **bîre** **zis?** (SF, 91)  
 have-AUX.PERF.1SG well say-PTCP  
 'Did I say it well?'
- b. io **n-âm** **bîre-nţeles** (SF, 168)  
 I not=have-AUX.PERF.1SG well understand-PTCP  
 'I did not understand well.'
- c. ke **îe s-a** **vet'** **opît** (AK, 338)  
 that he CL.REFL.3SG=have-AUX.PERF.3SG already get.drunk-PTCP  
 'that he already got drunk'
- d. Iel'i **s-âu** **atunce** **ustraşit** (SF, 187)  
 they CL.REFL.3PL=have-AUX.PERF.3PL then get.scared-PTCP  
 'and then they got scared'
- e. **vor** **atunce** **cuvintă** (SF, 158)  
 will-AUX.FUT.3PL then speak-INF  
 'they will speak then'
- f. si **îa** **l-av** **musât**  
 and she CL.ACC.M.3SG=have-AUX.PERF.3SG beautifully  
**zahvalît** (SP, 13)  
 thank-PTCP  
 'and she thanked them a lot'
- g. Şi ie che **s-a** **chiaro** **priçudit,**  
 and he that CL.REFL.3SG=have-AUX.PERF.3SG very wonder-PTCP  
 che svoini **n-a** **şavo** **vezut,**  
 that never not=have-AUX.PERF.3SG like.this see-PTCP  
 ni avzit pre tota luma (TC, 7)  
 nor hear-PTCP in all world  
 'And he was very astonished, because he had never seen something like this, anywhere in the world.'
- h. io **n-âm** **colę** **fos** (SF, 155)  
 I not=have-AUX.PERF.1SG there be-PTCP  
 'I wasn't there.'

Moreover, in structures without auxiliaries, these adverbs occur in preverbal position; notice (7a) in particular, where the 'well'-adverbial is trapped between the subject and the synthetic lexical verb, clearly indicating a low position of the lexical verb on the spine<sup>8</sup>.

7. a. ke **voi** **bîre** **ştiţ** (SF, 177)  
 that you-PL well know-IND.PRES.2PL  
 'that you know well'
- b. şî **muşat** **zehvales** (TC, 11)  
 and beautifully thank-IND.PRES.1SG  
 'and I thank you a lot'

The position of the lexical verb with respect to adverbials is an indicator for a lower position of the lexical verb on the clausal spine<sup>9</sup>.

## 2.2.2. Other Patterns of Scrambling

The scrambling of several types of constituents in between the auxiliary and the lexical verb has a double significance: on the one hand, it is a supplementary argument for low verb movement; on the other hand, it shows that Istro-Romanian auxiliaries show a lower degree of grammaticalization being self-standing verbal elements, at least when compared to Daco-Romanian (Dragomirescu and Nicolae 2016, 2018). The constituents that can occur in between the auxiliary and the lexical verb are: the subject realized as a simple nominal phrase (8a) or as a complex one (8b), the prepositional object (8c), the temporal adverbial

and the direct object (8d), the pronominal subject and the manner adverbial (8e), etc.

8. a. Când a cesaru dozneit (TC, 23)  
 when have-AUX.PERF.3SG emperor-NOM find.out-PTCP  
 ‘when the emperor found out’
- b. Când au mul’era lu cesta ūom verit  
 when have-AUX.PERF.3SG wife GEN this man come-PTCP  
 cu merinda (TI, 146)  
 with lunch  
 ‘When this man’s wife brought lunch’
- c. Iel’ a zehvalit  
 they.NOM have-AUX.PERF.3PL thank-PTCP  
 și s-a cu ie pozdravit (TC, 12)  
 and CL.REFL.3PL=have.AUX.PERF.3PL with her-ACC greet-PTCP  
 ‘They thanked her and greeted her.’
- d. și inche n-ŭam nigdar ūom  
 and yet not=have- nowhere human-ACC  
 AUX.PERF.1SG  
 vezut (TC, 26)  
 see-PTCP  
 ‘and I did not see any human anywhere’
- e. cum ŭam io bire zis (TC, 45)  
 as have-AUX.PERF.1SG I-NOM well say-PTCP  
 ‘as I said well’

Scrambling is also found in old Romanian, alongside interpolation (see Dragomirescu 2013; Nicolae 2019b, ch. 3). As shown in Nicolae (2019b), there is no evidence for Aux-to-C movement in old Romanian; therefore, strings of the form Aux—(scrambled) XP(s)—V (in conjunction with other properties of old Romanian) constitute convincing evidence in favour of a lower position of the verb on the clausal spine. By contrast, as argued in previous work (Dragomirescu and Nicolae 2020) and as will also be shown below, Aux-to-C movement is available in Istro-Romanian; from this perspective, scrambling is compatible in Istro-Romanian with two structural analyses (being an instance of parametric ambiguity in the sense of Clark and Roberts 1993)—one in which the Aux resides in the IP and another with Aux-to-C movement—hence, it only represents partial evidence for low verb movement. However, due to the particular word order of the scrambled elements, there are examples such as (8e) which clearly favour an analysis in which the verb occupies a lower position on the clausal spine. In this example, the nominative subject *io* (‘I’) precedes the vP-edge adverbial *bine* (‘well’), which in its turn precedes the lexical verb; the most plausible analysis takes the subject to be in the canonical Spec,TP position and the adverbial in its base position, thus with the lexical verb occupying a lower position (presumably on the edge of the vP-domain), irrespective of the position of the auxiliary.

To sum up, Istro-Romanian scrambling also provides indirect evidence for low verb movement.

### 2.3. Aux-to-C and Other Word Order Patterns with Pronominal Clitics and Auxiliaries

As extensively shown in Dragomirescu and Nicolae (2020), Istro-Romanian also shows instances of Aux-to-C movement, reflected by the Aux-Cl ordering. It is highly likely that Aux-to-C is, in part, an effect of language contact, as it is well known that Croatian displays Wackernagel cliticization (Čamdžić and Hudson 2007; Schütze 1994; Migdalski 2009). However, there are examples such as (9b) that show that Aux-to-C also occurs when the clause-initial position is occupied by another prosodically integrated constituent.

9. a. ău se dus la ea (SF, 96)  
have-AUX.PERF.3PL CL.REFL.PASS take-PTCP at her  
'they were taken to her'

The fact that Aux-to-C in Istro-Romanian may be partially determined by Wackernagel's law (either imported from Croatian as an effect of language contact, or preserved in Istro-Romanian from a medieval Romance phase in the form of the Tobler-Mussafia law<sup>10</sup>, "ultimately a Romance-specific reanalysis of the Wackernagel Law", as characterized by Ledgeway 2012, p. 161) is in itself a supplementary piece of evidence in favour of the non-clitic nature of Istro-Romanian auxiliaries: auxiliaries are good candidates for occupying a clause-initial position; hence, they are not clitics.

Moreover, in clusters with pronominal clitics, auxiliaries, and lexical verbs, virtually every word order possibility is attested: besides **Aux-Cl-V** (9), we find **Aux-V-Cl** (10a), **Cl-Aux-V** (10b); **Cl-V-Aux** (10c); **V-Cl-Aux** (10d); **V-Aux-Cl** (10e). This flexibility shows that Istro-Romanian patterns both with Daco-Romanian and the Balkan languages more generally—in displaying LHM patterns (Rivero 1994) such as (10d) and (10e)—and with the (older stages of the) Western Romance languages<sup>11</sup>—through the availability of Aux-to-C movement (9), (10a). Thus, both the lexical verb and the auxiliary are equally good candidates for movement to C.

*Relevance for the status of Istro-Romanian auxiliaries.* We believe that this word order flexibility is highly relevant for the status of Istro-Romanian auxiliaries.

In previous work, Nicolae (2015, 2019b) has argued that lexical verbs, not auxiliaries, may undergo movement to C in old Romanian, and that this is determined by their morphophonological nature. To be more precise, it is shown that Rivero’s (1994) LHM pattern is derived by Vicente’s (2007) (cf. also Kayne 1991) V<sup>0</sup>-to-Spec analysis (an analysis also adopted by (Harizanov 2016) in the derivation of Bulgarian participle fronting). Old Romanian auxiliaries (which are clitics) remain in situ, while lexical verbs move to C; evidence that clitics themselves cannot move to C, while non-clitic elements may undergo movement to C comes from the incorporation of clitic adverbs (clitic adverbials incorporate into the structure of the lexical verb and move along with it, but cannot themselves move) and from the blocking effects of phrasal negation on V-to-C movement<sup>12</sup>. Turning now to Istro-Romanian, from the sets of examples in (9) and (10), it appears that both lexical verbs and auxiliaries may undergo movement to C. Applying the same logic as for old Romanian, it follows that in Istro-Romanian auxiliaries too may be categorized as non-clitic elements, this ensuring their eligibility for movement to C<sup>13, 14</sup>.

As a side note, it is important to specify that, up to the present movement, we have not been able to identify a clear trigger of verb movement to C (be it an auxiliary or the lexical verb) in Istro-Romanian. On the Croatian pattern, Wackernagel requirements might be one of the causes, but this does not hold for all the situations where we find verb movement to C. This state of affairs strongly resembles old Romanian, where a clear trigger for V-to-C movement could not be identified either, a fact which lead to interpreting old Romanian V-to-C movement as an instance of old Romance “relaxed” V2<sup>15</sup>, whereby movement to C is triggered by a formal feature in the C-domain, which does not have a clear functional correlation.

To sum up, Aux-to-C movement is relevant for assessing the status of Istro-Romanian auxiliaries: if we agree that, as in old Romanian, only non-clitic elements may undergo movement to C, then the fact that Istro-Romanian auxiliaries may undergo movement to C indicates that they are not clitics.

#### 2.4. Summary: Non-Clitic Auxiliaries in Istro-Romanian

In this section, we have reviewed the evidence in favour of analysing Istro-Romanian auxiliaries as full words (non-clitic elements); this consists in the following:

- ability of auxiliaries to license VP-ellipsis;
- scrambling and interpolation, formally analysed as instances of low(er) verb movement on the clausal spine;
- Aux-to-C movement; Istro-Romanian auxiliaries may undergo movement to C just as the lexical verb of Daco-Romanian and other Balkan languages that display LHM.

### 3. Retention of an Archaic Feature vs. Contact: Old Romanian and Croatian

In this section, we examine the phenomena discussed above with respect to old Romanian and Croatian, in order to formulate a proper analysis of the Istro-Romanian data. One of the important goals of this paper is to determine the weight played by heritage vs. language contact in the syntax of Istro-Romanian, and VP-ellipsis and the other word order phenomena discussed here offer the perfect setting to carry out this investigation.

#### 3.1. VP-Ellipsis

##### 3.1.1. Old Romanian

In old Romanian, VP-ellipsis is very rarely attested (the five examples in (11)—see [Nicolae 2019b](#), p. 85; [Zamfir 2007](#), pp. 163, 320; [Carabulea 2007](#), p. 45). In four of these examples, (11a), (11b), (11d), (11e), the ellipsis is co-licensed: the auxiliary is accompanied by functional material with which it makes up a cluster. Co-licensing is a form of phonological enhancement that bypasses the morphophonological licensing problem of auxiliaries: it indicates that old Romanian auxiliaries are transitioning from a full word status to a clitic status.

11. a. de să va cunoaște carii  
if CL.REFL.PASS will-AUX.FUT.3SG know-INF who  
l-au rănit și  
CL.ACC.3SG.M=have-AUX.PERF.3PL hurt-PTCP and  
carii **nu** l-au ✓ (Prav.1646: 168)  
who NEG CL.ACC.3SG.M=have-AUX.PERF.3SG  
'if it will be known who hurt him and who did not'
- b. cine l-au rănit și

cine **nu** l-au ✓  
who not CL.ACC.M.3SG=have-AUX.PERF.3SG  
'who hurt him and who did not' (Prav.1646:168)
- c. De voiu face aceasta de voe, plată  
if will-AUX.FUT.1SG do-INF this by will payment  
am; iară să **voiu** ✓, fără  
have-IND.PRES.1SG but if will-AUX.FUT.1SG without  
vistiernicie mi-e data.  
treasury CL.DAT.1SG=be-IND.PRES.3SG give-PTCP  
'If I do this willingly, I will be paid; but if I (do it) unwillingly, I will be given the treasury (department).' (NT.1648:231r)
- d. de-l va fi mutat sau  
if=CL.ACC.M.3SG will-AUX.FUT.3SG be-IRR<sup>16</sup> move-PTCP or  
de **nu-l** **va** **fi** ✓  
if not=CL.ACC.M.3SG will-AUX.FUT.3SG be-IRR  
'whether he has moved it (=the border) or has not' (Prav.1646:78)
- e. de va fi greșit cu înșelăciune  
if will-AUX.FUT.3SG be-IRR err-INF with fraud  
sau de **nu** **va** **fi** ✓  
or if not will-AUX.FUT.3SG be-IRR  
'if he has deceitfully committed a mistake or not' (Prav.1646:160)

As will be shown below (see Section 3.2.1), the other condition on VP-ellipsis licensing is met: old Romanian shows evidence for low(er) verb movement on the clausal spine.

##### 3.1.2. Croatian

Auxiliary-licensed VP-ellipsis is also attested in BCS (12) ([Stjepanović 1998](#)), as shown in (12). Arguing that clitics are located in different projections in syntax, [Stjepanović \(1998\)](#) shows that the size of the ellipsis site is variable: in (12b), ellipsis targets both the dative and the accusative clitic (along with the lexical verb), while in (12c), in the same configuration

In analytic structures, the interposition of adverbials in between the auxiliary and the lexical verb is well represented. Thus, the following V-movement diagnostic adverbials are found: low adverbs such as *bine* ('well') (14), high adverbs such as *amu* ('now') (lexicalizing a T-related specifier) (15), and adverbial expressions such as *acumuși, de sârg* ('quickly') (16), which are ambiguous between an Asp-event reading and Asp-process reading, occupying different positions in Cinque's hierarchy (the high adverb space and the low adverb space, respectively). (Floating) quantifier subjects may also break the auxiliary-lexical verb cluster (17).

14. *și va bine orând<u>i lucrurile tale*  
and will-AUX.FUT.3SG well organize-INF things.DEF your  
'and he will organize your things well' (DVT.1679-99:323v)
15. a. *de vămă amu pune științele noastre*  
if will-AUX.FUT.1PL now put-INF knowledge.PL.DEF our  
înaintea Dumnezeu  
before GEN God  
'if we now put our knowledge before God' (CC2.1581:19–20)
- b. *De veri amu vărsa lacrimi pre fața ta*  
if will-AUX.FUT.2SG now shed-INF tears on face.DEF your  
'if you now have tears shedding on your face' (CC2.1581:52)
16. a. *că vei acmuși muri*  
that will-AUX.FUT.2SG quickly die-INF  
'that you will quickly die' (FT.1571-5:1v)
- b. *de s-au de sârgu lătit*  
so.that CL.REFL.3SG=have.AUX.PERF.3SG quickly expand-PTCP  
'so that it (=Moldova) quickly expanded' (ULM.~1725:A-1f.2v)
17. *din a cui sfinție ne vom*  
from AL.F.SG whose holiness CL.REFL.PASS will-AUX.FUT.1PL  
*toți sfinți*  
all hallow-INF  
'from whose holiness we will all be hallowed' (CM.1567:241r)

Multiple interpolated and scrambled constituents are possible:

18. a. *se nu se cumva fără socotință*  
SĂ.SUBJ notCL.REFL.3PL somehow without judgement  
*meastece fără leage*  
mix.up-SUBJ.3PL without judgement  
'they should not recklessly interfere without judgement' (Prav.1581:243v)
- b. *cum au Cristus noauă dzis*  
as have-AUX.PERF.3SG Christ us.DAT tell-PTCP  
'as Christ told us' (FT.1571-5:1v)

Nicolae (2019b: ch. 3) documents the entire range of interpolated and scrambled constituents; for the purposes of the present argument, the interpolation and scrambling of adverbials and of quantifiers represent good empirical evidence for the existence of the low(er) verb movement option in the grammar of old Romanian.

Furthermore, the statistical examination of interpolation and scrambling (see Nicolae 2019b, ch. 3) has shown that, in old Romanian, these phenomena preponderantly occur in embedded clauses. From a diachronic comparative Romance perspective, this distribution confirms the formal analysis based on low verb movement: it is expected for low verb movement to mostly occur in embedded clauses where V-to-C movement (i.e., V2) is generally blocked by the lexicalization of complementizers or *wh*-elements.

### 3.2.2. Croatian Interpolation and Scrambling, and Their Relevance

Defined as above (Section 1.3) (i.e., the separation of the clitic pronoun/auxiliary verb from the (finite) lexical verb), interpolation and scrambling are also found in BCS. Thus, in

(19a–b), we see the adverbial ‘always’ separating the clitic pronoun from the synthetic verb, while in (19c–d), we see temporal and manner adverbs intervening between the auxiliary and the lexical verb.

19. a. Jelena **me** stalno nešto **zapitkuje.**  
 Jelena CL.ACC.1SG always something ask-IND.3SG  
 ‘Jelena is always asking me something.’
- b. Jelena **me** stalno **zapitkuje** nešto.  
 Jelena CL.ACC.1SG always asks-IND.3SG something  
 ‘Jelena is always asking me something.’
- c. Marko **je** tek juče nešto **saznao.**  
 Marko be-3SG only yesterday something find-out-PTCP  
 ‘Marko found out something only yesterday.’
- d. Javi **mi** ako se **budeš**  
 let-know CL.DAT.1SG if REFL be-PRES.2SG  
 ‘Marko found out something only yesterday.’  
nečega iznenada **setio.**  
 something-GEN suddenly remember-PTCP  
 ‘Let me know if you suddenly remember anything.’  
 (Stojanović 1997, pp. 307, 313–14)

Note that more than one constituent can be interpolated (19a) or scrambled ((19c), (20)). Interpolation and scrambling occur both in main clauses (20a–b) and in embedded clauses (20c).

20. a. Juče **mi** **je** Marija nešto **ispričala.**  
 yesterday CL.DAT.1SG be-3SG Marija something tell-PTCP  
 ‘Marija told me something yesterday.’
- b. Marko **je** tek juče Jelenu upoznao.  
 Marko be-3SG only yesterday Jelena meet-PTCP  
 ‘Marko met Jelena only yesterday.’
- c. Jasna **mi** **je** rekla da  
 Jasna CL.DAT.1SG be-3SG tell-PTCP that  
**je** Petar nešto **kupio.**  
 be-3SG Peter something buy-PTCP  
 ‘Jasna told me that Peter had bought something.’  
 (Stojanović 1997, pp. 307–8)

While it is clear that, on the surface, the phenomena in (18) to (20) are very similar to their Istro-Romanian and old Romanian counterparts, it is hard to determine whether these data can be analysed relying on the same rich clausal structure as that employed for Istro-Romanian and old Romanian, two Romance varieties. Given the C-orientation (and Wackernagel nature) of Croatian pronominal clitics (Mišeska Tomić 1996; Rivero 1997; Migdalski 2009), a formal analysis of interpolation based on low(er) verb movement is uncertain—at most speculative. On the other hand, Stojanović (1997, p. 310) observes that BCS main (i.e., lexical) verbs in periphrastic tenses do not raise out of the VP; thus, low(er) verb movement can be invoked, at least in the analysis of scrambling.

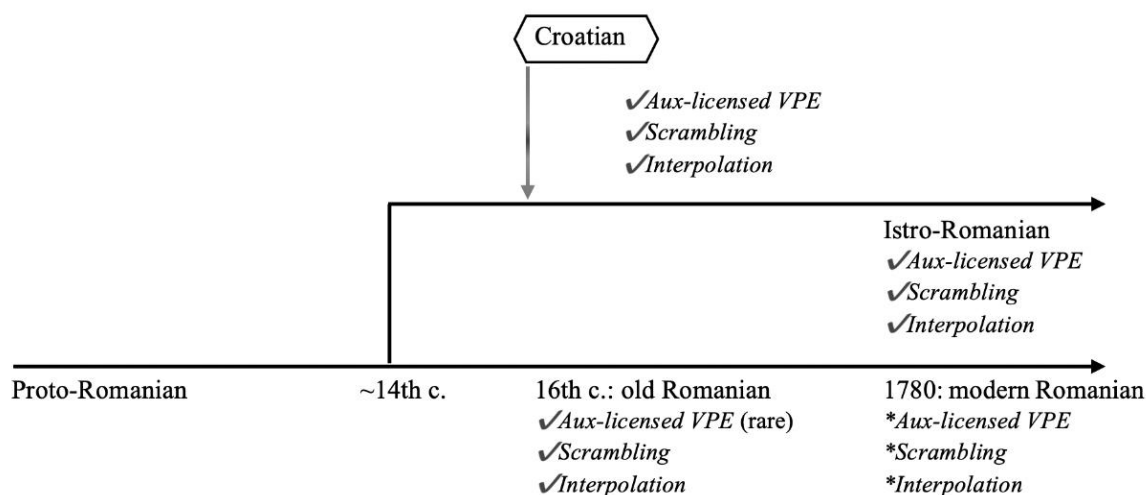

What is important for the purposes of the present analysis is the existence of these surface string identities in Croatian, Istro-Romanian, and old Romanian: this supports the idea that convergence obtains, even though it is limited to surface phenomena, not to deep structural properties.

#### 4. Analysis and Conclusions

Putting aside the issue of what the correct formal analysis of the Croatian data is, what we unequivocally observe is the existence of *surface string-identity*: identical word order phenomena are found in old Romanian, Istro-Romanian (which shares the same ancestry as

old Romanian), and Croatian/BCS (the contact language). From this perspective, language contact with Croatian appears to have acted as a catalyst: several word order patterns of the contact language overlap with similar patterns of the target language, even though they might not have the same syntactic structure. This overlap generates convergence (cf. Hickey 2010), ensuring the preservation of several archaic properties: in the particular case of auxiliaries, they retain the full word status, i.e., they do not move further up on Hopper and Traugott's (2003) grammaticalization cline. The representation below (Figure 1) summarizes the relation between Istro-Romanian, old Romanian, and Croatian:

**Figure 1.** The relation between Istro-Romanian, old Romanian, and Croatian.

The existence of auxiliary-licensed VPE along with low verb movement represents convincing evidence for the non-clitic nature of auxiliaries. We believe that this is not a trivial property, limited to (morpho)phonological component. Since it occurs along with correlation with other properties, the non-clitic nature of auxiliaries is a feature that genuinely reflects some central properties of Istro-Romanian syntax. Secondly, it explains the massive variation found in the Istro-Romanian verbal nexus: being categorised as non-clitic elements, auxiliaries show the same displacement properties like full lexical verbs. Thus, along with the double setting of pronominal clitics, I-oriented (the Romance parameter setting) and C-oriented/Wackernagel (a setting resulting from contact with Croatian) (see Dragomirescu and Nicolae 2018, 2020), the word order freedom of auxiliary verbs, lexical verbs, and pronominal clitics described in Section 2.3 above derives from the fact that auxiliaries are equally good candidates for movement to C; Rivero's LHM rule may therefore affect auxiliaries too.

Our findings are consonant with recent scholarship on the effects of language contact in syntax. In the analysis of the Judeo-Spanish spoken in Bulgaria, besides confirming the fact that in language contact settings structures and elements belonging to narrow syntax are stable, while interface phenomena are vulnerable, Fischer (forthcoming)<sup>17</sup> also shows that equivalence relations are important: “in order for these structures to be retained or innovated equivalence relations between languages in contact are relevant”. The non-clitic auxiliaries of Istro-Romanian are a perfect illustration of this idea: a morphophonological property which has syntactic effects is retained as it instantiates an equivalence relation between the two languages—particularly, features associated with non-clitic auxiliaries are found both in Croatian and Istro-Romanian.

**Author Contributions:** Conceptualization, A.D. and A.N.; methodology, A.D. and A.N.; formal analysis, A.D. and A.N.; investigation, A.D. and A.N.; writing—original draft preparation, A.D. and A.N.; writing—review and editing, A.D. and A.N. \* The corpus is based on a subset of the texts surveyed in Pană [Până Dindelegan’s \(2016\) Syntax of Old Romanian](#). The abbreviation is followed by the year marking the date of the text. An interval is marked when the dating is not precise. Each example cited is followed by a reference to the folio (°/°) of manuscript/printed text from which it is excerpted. Where editors do not indicate the folios of the text, reference is made to the page of the edition. The localization of the texts is given at the end of the entry in round brackets. Our colleague Emanuela Timotin established the corpus and the citation conventions for the *Syntax of Old Romanian*; we would like to extend our gratitude to her.

## Notes

- There is a distinction between Northern and Southern Istro-Romanian, two mutually comprehensible yet distinct varieties which diverge in verb inflections and in other grammatical and phonological respects (see [Kovačec 1984](#), especially pp. 550–54, and [Maiden 2016](#), p. 91, a.o.); Northern Istro-Romanian is spoken to the north of Mount Učka (in the village of Žejane), while Southern Istro-Romanian is spoken in several villages and hamlets (Šušnjeveica, Brdo, Noselo, etc.) to the south of Mount Učka. The grammatical properties relevant for the phenomena discussed in this paper are present both in the north and in the south; henceforth, by Istro-Romanian, we refer to all the possible varieties present on the territory.
- When referring to empirical phenomena common to Croatian, Serbian, Bosnian, we use the conventional abbreviation BCS.
- For Istro-Romanian, we have used the corpora collected in the 20th century by Sextil Pușcariu, Leca Morariu, Traian Cantemir, Richard Sârbu and Vasile Frătilă, and August Kovačec; we have preserved the transcription conventions used in these sources. With respect to the other idioms discussed here (old Romanian and Croatian/BCS), most of the old Romanian examples used for illustration are taken from personal previous work ([Dragomirescu 2013](#); [Nicolae 2015, 2019b](#)), and the Croatian examples are taken over from the reference literature.
- As pointed out by one of the reviewers, since the settlement of the Istro-Romanians in Istria, the speakers of this idiom have been in contact with (standard) Croatian and the Čakavian variety (cf. [Kalsbeek 1998](#) for a descriptive account of the Čakavian variety spoken in Orbanici). The fieldwork carried out in Istria (particularly in Šušnjeveica, Žejane and Brdo, as well as in other places not traditionally inhabited by Istro-Romanians, but where Istro-Romanians have migrated—e.g., Brseč or Rijeka) in August–September 2021 (by a team of researchers which includes the authors of the present article) has revealed that the current Istro-Romanian speakers no longer speak the Čakavian variety, but rather standard Croatian.

- 5 Auxiliary-licensed VP-ellipsis should be properly distinguished from verb-stranding VP-ellipsis (cf. Martins 1994, and see  
Goldberg 2005 for a comprehensive analysis), which is a different type of ellipsis.
- 6 There is empirical evidence for the fact that in old Romanian a low, *v*-oriented pronominal cliticization site is also residually active  
(cf. Nicolae 2019c for details); other Romance varieties also show instances of low cliticization (see Ledgeway and Lombardi 2005;  
Tortora 2014). However, none of the diagnostic features for this low site discussed by Nicolae (2019c) for old Romanian is found  
in Istro-Romanian, hence a potential low position for pronominal clitics in this idiom is excluded by default.
- 7 The abbreviation list for the source of the Istro-Romanian and old Romanian examples is present at the end of the article.
- 8 One of the reviewers raises the legitimate question of whether these adverbs raise to a high position (maybe due to information  
structure processes), which would imply that the position of the verb might not be that low. This hypothesis is discussed at  
length and discarded in Dragomirescu and Nicolae (2018) with reference to Istro-Romanian and in Nicolae (2019b) with respect  
to old Romanian; see also Schifano (2014), who addresses the issue of preverbal adverbials in standard modern Romanian, and  
shows that, besides interpretative effects, there are formal cues signalling adverb movement to the left periphery.
- 9 A larger basis of adverbials would have provided a finer-grained diagnosis of the level of verb movement; however, in this  
respect, we have been limited by the source material (a written, non-annotated corpus).
- 10 There is evidence for the fact that the Tobler-Mussafia law was residually active in old Romanian (Nicolae and Niculescu 2015).
- 11 Aux-to-C movement is found in old Spanish (Rivero 1994) and old Italian (Roberts 1994; Poletto 2014).
- 12 As an explanation, we can only speculate that clitic elements cannot themselves target a specifier position. The data of old  
Romanian and the residual instances of V-to-C in modern Romanian (conditional imprecations, positive imperatives and gerunds)  
empirically indicate that a clitic (a clitic auxiliary or a clitic adverbial) cannot itself undergo movement to C; clitic adverbials  
may incorporate into the structure of the moving verb and travel along with it to C, but they cannot undergo movement by  
themselves; auxiliaries do not incorporate and remain in the IP (see Nicolae 2019b, pp. 16–25 for details).
- 13 Notably, LHM with auxiliaries is also available in BCS/Croatian. The following paradigm (i) from Wilder and Ćavar (1994, p. 6)  
is illustrative in this respect; here, in the past perfect (ib) (made up of the combination of both a finite form and a participial  
form of the auxiliary BE (*biti*) plus the participle of the main verb), we see the auxiliary *biti* undergoing LHM (ib) (witness the  
ungrammaticality of (9c)):

(i)	a.	Marija	i	Ivan	su	bili	čitali	knjigu.
		Maria	and	Ivan	be-3PL	be-PTCP	read-PTCP	book
	b.	<b>Bili</b>	su		čitali	knjigu.		
		be-PTCP	be-3PL		read-PTCP	book		
		'they (Maria and Ivan) had read the book'						
	c.	*Su	bili		čitali	knjigu.		
		be-3PL	be-PTCP		read-PTCP	book		

- 14 Morphophonological strength of the sort advocated here is also relevant in BCS/Croatian. Wilder and Ćavar (1994, p. 22) show  
that unstressed(/non-reduced) auxiliaries (i) block the application of LHM of lexical verbs in Croatian (ib), in opposition to their  
unstressed (reduced) counterparts (ii) (LHM in (iib)), with which they have in common identical tense properties.

(i)	a.	(Ja)	hoću	čitati	knjigu.	(ii)	a.	Ja	ću	čitati	knjigu.
		I	will-1SG	read-INF	book			I	will-1SG	read-INF	book
		'I shall read the book'						'I shall read the book'			
	b.	*Čitati	hoću	knjigu.			b.	Čita-ću (=čitati-ću)		knjigu.	
		read-INF	will-1SG	book				read-INF=will-1SG		book	

- 15 The notion "relaxed V2" was introduced by Ledgeway (2007) to characterize old Romance V2 grammars (except for Old French,  
which exhibits continental Germanic-type strict V2, cf. Roberts 1993). Thus, in these varieties, the verb in finite matrix clauses is  
required to move to C, this movement operation being "generally, though not invariably, accompanied by a further movement  
rule which fronts one (or more) salient constituent(s) to a preverbal position" (Ledgeway 2007, p. 122).
- 16 IRR stands for 'irrealis'.
- 17 Fischer (forthcoming) focuses only on syntax-information structure phenomena (stylistic fronting and clitic doubling) in a contact  
setting, but clearly stresses that her account extends to the other interface (the syntax-phonology/prosody interface) as well.
