DATA STRUCTURE AND BASIC INFORMATION TO INTERPRET THE DATA

S3. Supplementary material.

INDEX

INTRODUCTION

This document contains two important pieces of information. Both are in a table format. The first identifies the connection between the sections and their respective IDs. The second includes all the information needed to correctly interpretate the dataset.

SECTION ID TABLE

The section id is utilized to create the question id and is included ID is included at the beginning of the question ID (Q.ID) in order to facilitate the comprehension of the context of the question.

Section ID	Section topic	Questions included in the section
A	Sociodemographic questions	1 to 7
B	Attitudes towards sustainability	8 to 10
C	Attitudes and perceptions about waste sorting at source and waste treatment	11 and 12
D	Attitudes and perceptions regarding the acceptance of biofuels	13 to 15
E	Attitudes and perceptions regarding the acceptance of biorefinery facilities	16 to 19
F	End of survey	20 and 21

QUESTIONNAIRE BASIC INFORMATION TABLE

The next table is important to understand how the dataset is structured. First, we find the question ID column (Q.ID) that includes a unique identifier of the question. The second column includes the type of question which is important to understand how to proceed with the interpretation of the values included in the dataset.

There are different types of questions:

- One choice question: respondents can only choose one of the options provided as possible answers.

- Multiple choice question: respondents can choose one or more options.

- Likert scale question: respondents can only choose one of the following options: Completely disagree; Slightly disagree; Neither agree nor disagree; Slightly agree; Completely agree; N/A.

- Open-ended: respondents can include the response in a text box. Sometimes the text is restricted to certain characters (such as numbers only)

- Ordering question: respondents are asked to rank several options.

The third column is a short definition that helps to understand the main topic of the question the more easily. Fourth column shows the questions which are also included in the dataset. Each question is represented as a column in the dataset. Instead, in the fifth column of this table you can find the different values that the answer can adopt.

In addition, two more columns have been included to show the original questions asked to the respondents. This information corresponds to the sixth and seventh columns of the next table.

We highly recommend keeping the next table accessible when approaching the dataset.

Q.ID	Q. Type	Short definition	Translation (English)		Original formulation (Spanish)	
			Question	Values (separeted by ;)	Question	Values (separated by ;)
A1	One choice + Open-ended "other"	Gender	What is your gender?	Male; Female; Prefer not to say; Other (specify)	¿Cuál es su género?	Masculino; Femenino; Prefiero no decir; Otro (especificar)
A2	One choice	Age	How old are you?	Under 18; 18-24; 25-34; 35-44; 45-54; 55-64; 65+	¿Cuál es su edad?	Menos de 18; 18-24; 25-34; 35-44; 45-54; 55-64; 65+
A3	Open-ended	ZIP code	What is the ZIP code of the town where you live in the Community of Madrid (e.g. 28943, 28990….)?	--	¿Cuál es el código postal de la localidad en la que vive en la Comunidad de Madrid? (por ejemplo, 28943, 28990….)	--
