

## Supplementary Figures

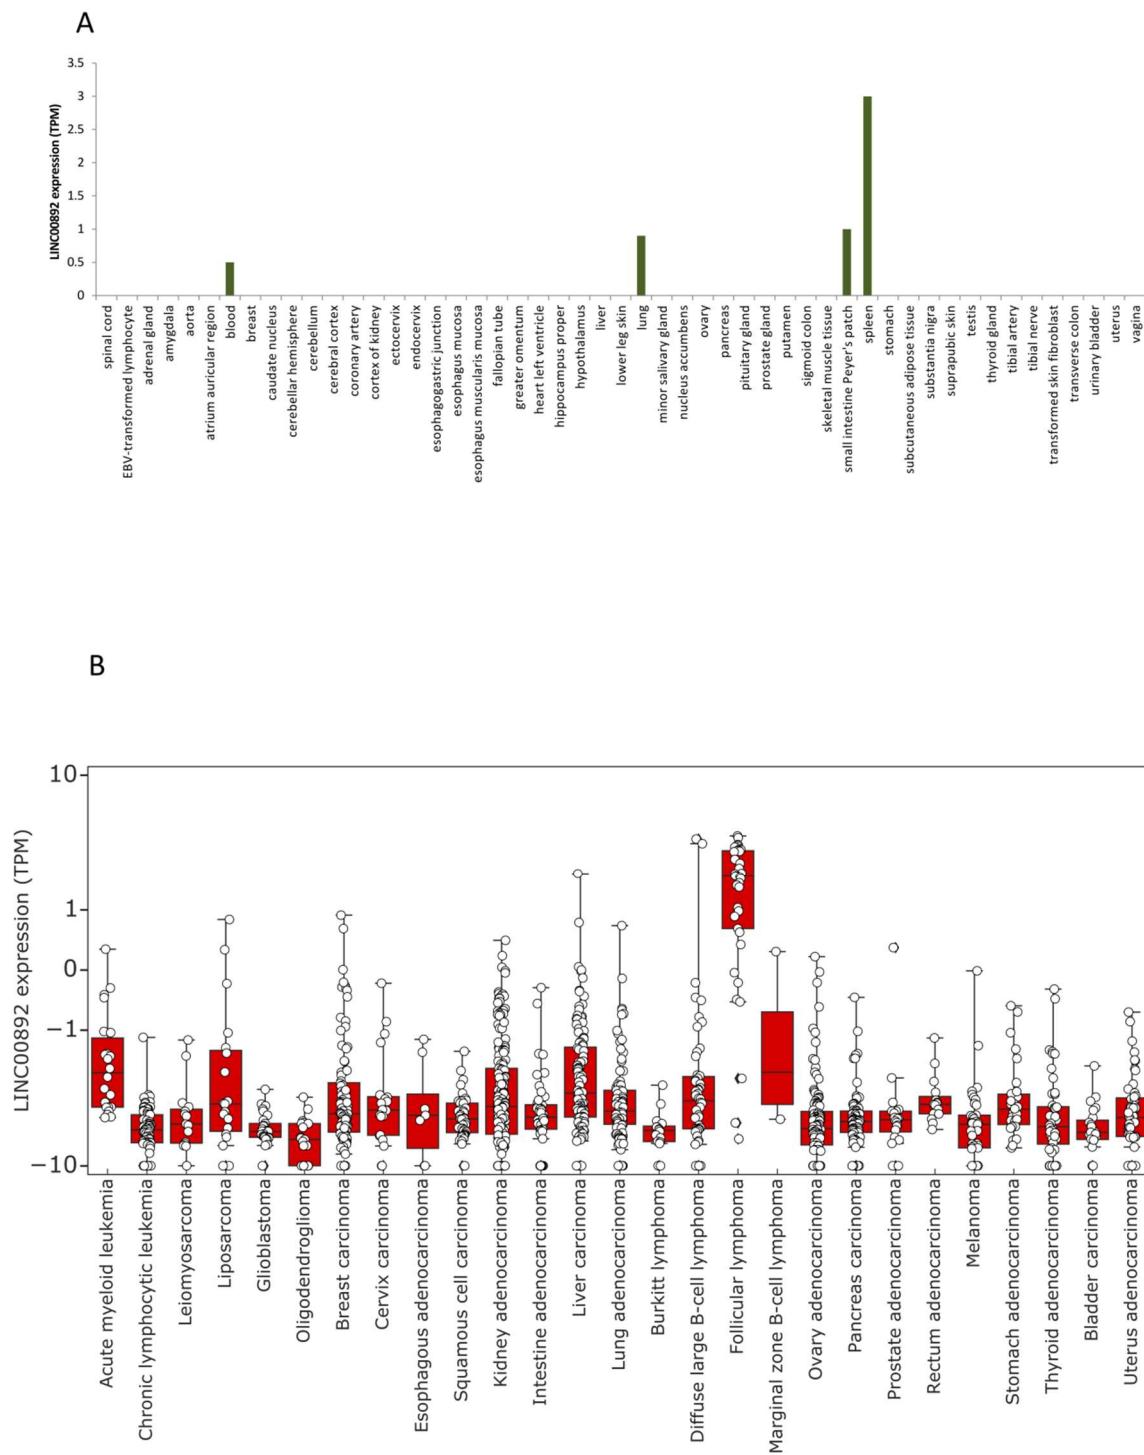

**Figure S1.** Gene expression analysis in Jurkat cells with a memory-like state, as in [25-27]. (A) RT-qPCR analysis of the indicated genes in non-stimulated Jurkat cells (NS), cells stimulated with PMA and ionomycin for 3 hours (ST1), cells stimulated as in ST1 and further grown for 4 days after stimulus withdrawal (SW4D) and SW4D cells stimulated a second time with PMA and ionomycin for 3 hours (ST2). GUSB was used as reference gene. (B) Gene ontology analysis of genes differentially expressed in the comparison of NS with SW4D Jurkat cells. The graph shows the significance of the enrichment of the indicated biological processes among both genes up-regulated and down-regulated in SW4D conditions. (C) Growth curve of Jurkat cells treated or not treated with a 3 hours pulse of PMA and ionomycin. Analysis has been performed in triplicate. (D) Analysis of the expression of the indicated genes in RNA-seq data of Jurkat cells left un-treated or stimulated with PMA/ionomycin for 3 hours ad left untreated for 4 days after stimulus withdrawal (SW4D).

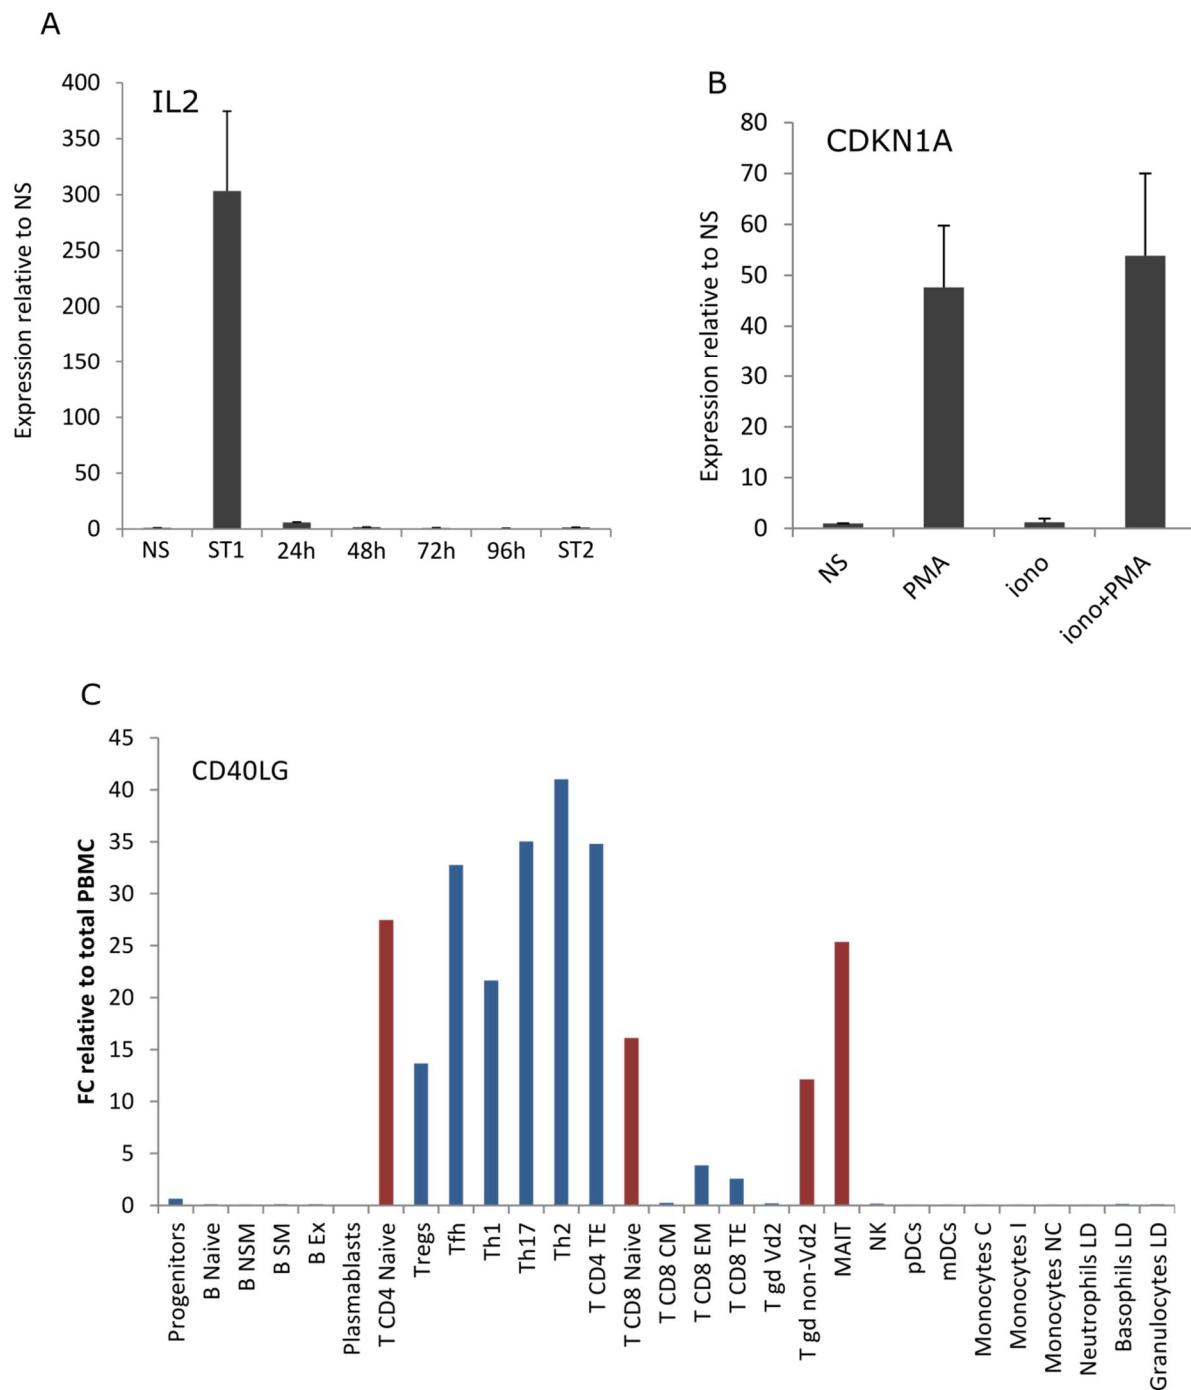

**Figure S2.** (A) Analysis of LINC00892 expression in data from Monaco et al. [30]. (B) Analysis of Gm14718 expression in different mononuclear cells derived from peripheral blood (PBMC) in data from the Expression Atlas (<https://www.ebi.ac.uk/gxa/home>).

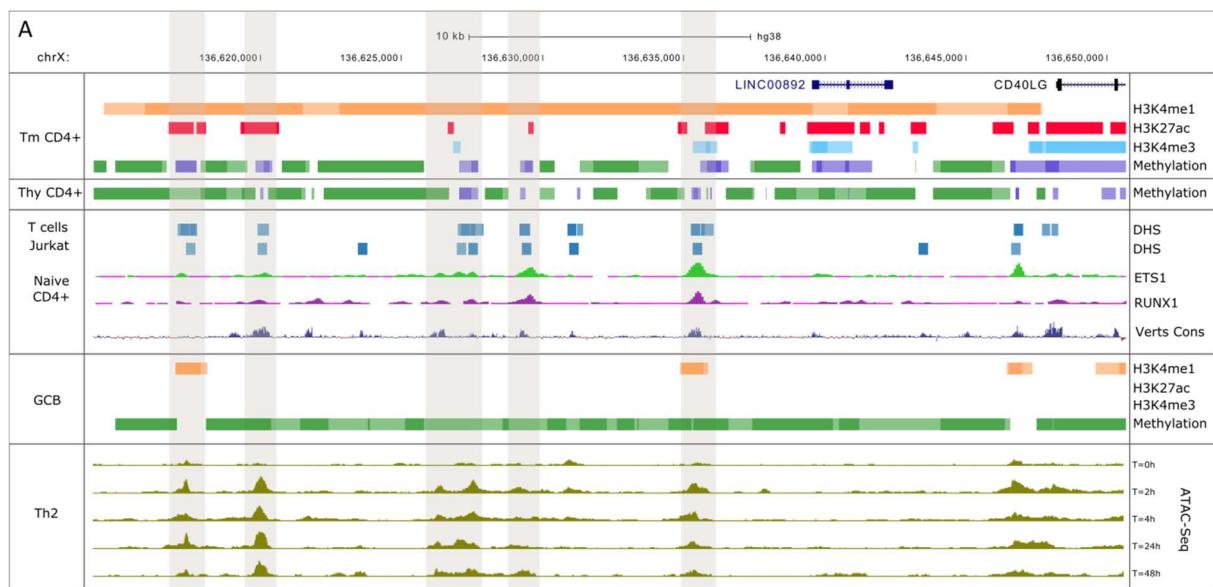

**Figure S3.** (A and B) PCR cloning of the LINC00892 cDNA from RNA extracted from a FL patient resulted in the identification of a novel isoform missing exon 2, as depicted in the gene graphic representation shown in panel B. (C) RT-qPCR analysis of RNA abundance in cellular fractions from Jurkat cells treated with PMA/ionomycin for 3 hours and collected 48 hours after stimulus wash. CHR is the chromatin fraction; NE is the nuclei enriched fraction and CE is the cytosolic fraction. Expression of G6PD is used as a marker for a typical cytosolic RNA and the expression of MALAT1 is used as a marker for a typical nuclear RNA. The experiment has been performed in quadruplicate.

**Figure S4.** Analysis of LINC00892 expression in normal (A) and cancer (B) tissues. (A) Analysis of LINC00892 expression in data from the Genotype-Tissue Expression (GTEx) Project. (B) Analysis of LINC00892 expression in the pan cancer data produced from the International Cancer Genome Consortium (ICGC).

**Figure S5.** (A) RT-qPCR analysis of IL2 expression in Jurkat cells left untreated (NS), stimulated with PMA/ionomycin for 3 hours (ST1), washed and collected after the indicated hours after stimulation, and after a second 3 hours PMA/ionomycin stimulus (ST2). (B) RT-qPCR analysis of CDKN1A expression in Jurkat cells left untreated (NS), stimulated with PMA only, ionomycin only or both PMA and ionomycin for 3 hours and collected 4 days after the stimulus. (C) Analysis of CD40LG expression in data from Monaco et al. [30]. Cell types where the expression of CD40LG differs from that of LINC00892 are marked in red.

**Figure S6.** Epigenetic landscape of the genomic locus including LINC00892 and CD40LG. The figure displays together publicly available data derived from different sources. On the right side the type of analysis is displayed, on the left the cell lines used for the analyses. Tm CD4+ are CD4+ memory T cells; Thy CD4+ stays for CD4+ thymocytes and GCB for germinal centre-derived B cells. Regions marked by the H3K4me1 histone modification are marked in orange. Regions marked by the H3K27ac histone modification are marked in red. Regions marked by the H3K4me3 histone modification are marked in blue. In the display of methylation data, hypermethylation is shown in green and hypomethylation in purple. ChIP-seq and methylation data are from the Blueprint Project. The figure also shows ATAC-Seq analysis in Th2 cells treated with CD3/CD28 at different time points [31]. (Shown are also the degree of sequence conservation among vertebrates (Verts cons), the presence of DNase hypersensitive sites (DHS) in either Jurkat or CD4+ T cells and the presence of binding sites for the transcription factors ETS1 and RUNX1 in Naive CD4+ T cells [41].

## Supplementary Methods

### *Cloning of LINC00892*

In order to be able to express the lncRNA transcript LINC00892 and possibly other lncRNAs, devoid of vector –derived sequences, we modified the mammalian expression vector pcDNA3.1 to remove most of the transcribed regions between the multicloning site and the transcription start site (TSS). The vector was modified by PCR using a forward primer located at the BGH-poly A site having an EcoRI and a BamHI sites in a 5' tail and a reverse primer located at the TSS with an EcoRI site in a 5' tail. The PCR product was ligated in order to create the pcDNA\_LNC vector having an EcoRI and a BamHI sites between the TSS and the poly-A site. Primer sequences are the following:

BGH-fw :CGGAATTCATAGGATCCTTCCTATATAAATGAGGAAATTGC

TSS\_rev: CGGAATTCTCTCTAGTTAGCCAGAGAGC

In order to clone the LINC00892 transcript in pcDNA\_LNC, we performed a reverse transcription reaction from total RNA extracted from an FL sample and used it in a PCR reaction with the following primers:

LINC00892\_fw: CGGAATTCAAGATGCAGACATGGCTGGATGTTC

LINC00892\_rev: CGGGATCCTGATTATGGGTATTGTTATTTCC

The amplified PCR product has been gel extracted and purified using the Gel extraction Kit from Qiagen, digested with EcoRI and BamHI and cloned in pcDNA\_LNC also digested with the same enzymes. Single clones containing an insert have been expanded and the purified DNA has been Sanger sequenced.

### *Nuclear/Cytoplasmic RNA fractionation*

A confluent T75 Flask of Jurkat cells is treated with PMA 20ng/ml and ionomycin 500 ng/ml for 3 hours, washed twice with 10 ml full medium and let rest in the incubator for 3 days. Cells are collected by centrifugation and the pellet is washed once with PBS. Washed cells are pelleted, resuspended in 0.5 ml of Buffer A and left on ice for 10 min. After checking under the microscope that more than 90% of the cells are lysed, the cell suspension is centrifuged 10 min at 1000xg at 4 °C to pellet nuclei. The supernatant is transferred to a new tube and is kept as the cytosolic fraction. The nuclear pellet is resuspended in 0.5 ml of Buffer C and left on ice for 10 min. The chromatin fraction is pelleted by centrifugation 10 min at 14000 rpm at 4 °C and the supernatant is transferred in a new tube as nuclear fraction. RNA is extracted from 100 ul of nuclear and cytosolic fractions and from the entire chromatin pellet.

Buffer A (hypotonic)	Buffer C
Hepes pH 8.0      10 mM	150 mM NaCl
MgCl <sub>2</sub> 1.5 mM	25 mM Tris pH 8.0
NaCl      10 mM	5 mM EDTA
DTT      0.5 mM	0.5 mM DTT
IGEPAL      0.1%	0.5% IGEPAL
1 x Complete <sup>TM</sup> (Roche)	1 x Complete <sup>TM</sup> (Roche)
100 U/ml SUPERase-In (Ambion)	100 U/ml SUPERase-In (Ambion)

### Supplementary Tables

**Table S1.** List of lncRNAs differentially regulated following treatment of Jurkat cells with PMA/ionomicin for 3 hours and collected 4 days after stimulus withdrawal (SW4D).
