

Figure S1. Schematic diagram of primers used in absolute quantification real-time PCR. Black arrows indicated the relative positions of the primers and red arrows indicated the position of the Taqman® probe which was targeted to different HID-1 transcripts. Blue lines showed the relative position of the start codon and red lines showed the stop codon which is predicted from the bioinformatics approach as a sense protein can be translated with this region of the transcripts.

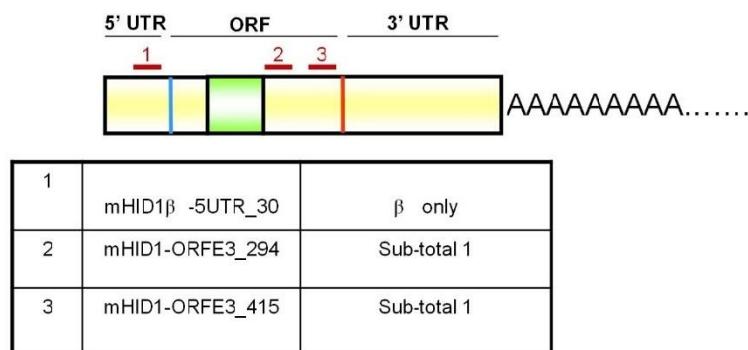

Figure S2. Schematics diagram of the relative position of siRNA on HID-1 β transcripts. Red bars indicated the position of siRNA.

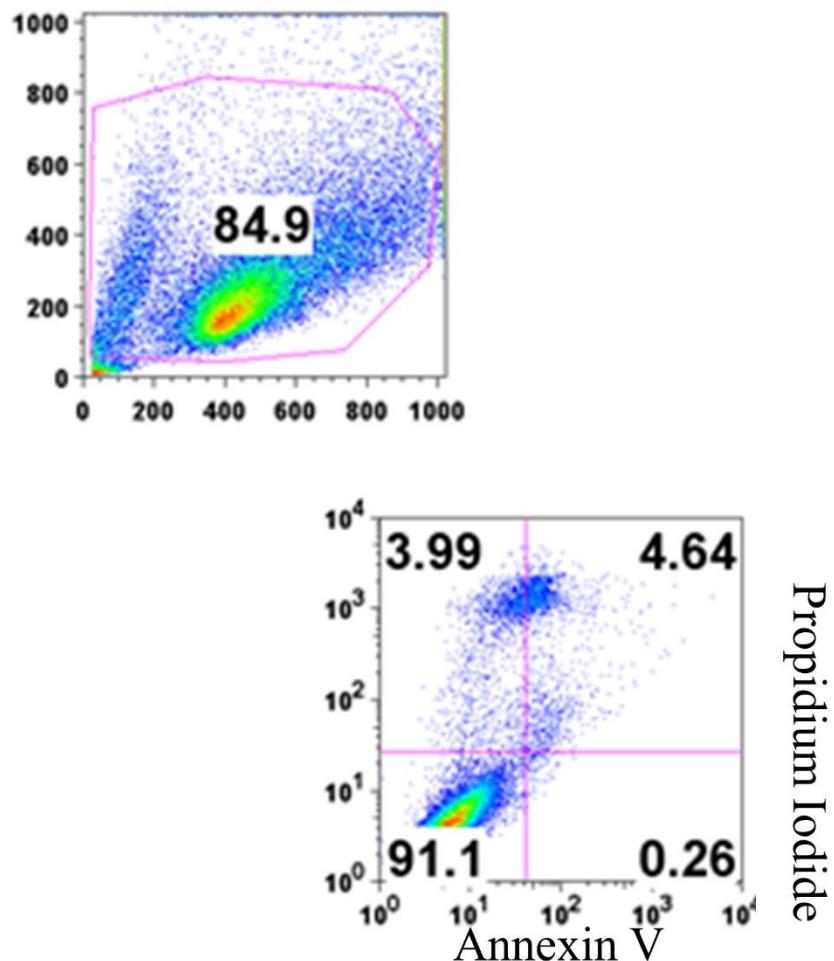

Figure S3. Gating Strategy for apoptotic cells determination by OGD in Neuro2a cells.

Table S1. Primers for absolute quantification real-time PCR.

Primer	Sequence (5' to 3')	Size (bp)
HID-1 α -IIIa	Sense - tgaaccagccaatcccttaaccta Antisense - ttccatttcatttatcactgcttg	171
HID-1 α -IIIb	Sense - tgaaccagccaatcccttaaccta Antisense - ctaggcgagagctaggaggaga	193
HID-1 β	Sense - gtgcgtgtgttgttcat Antisense - tccttcttaatcccttcgaacga	178
HID-1 γ	Sense - cccttcttcgtccctatgtgt Antisense - tccttcttaatcccttcgaacga	105
HID-1 κ	Sense - actccgtgacgggcctggaa Antisense - tccttcttaatcccttcgaacga	132
HID-S1	Sense - gaaaagaagaccagatgataat Antisense - tccttcttaatcccttcgaacga	125
HID-S2	Sense - gaaaagaagaccagatgataat Antisense - ctaggcgagagctaggaggaga	144
HID-E2 (Total)	Sense - gaaaagaagaccagatgataat Antisense - tccttcttaatcccttcgaacga	72
