

Supplementary Figures

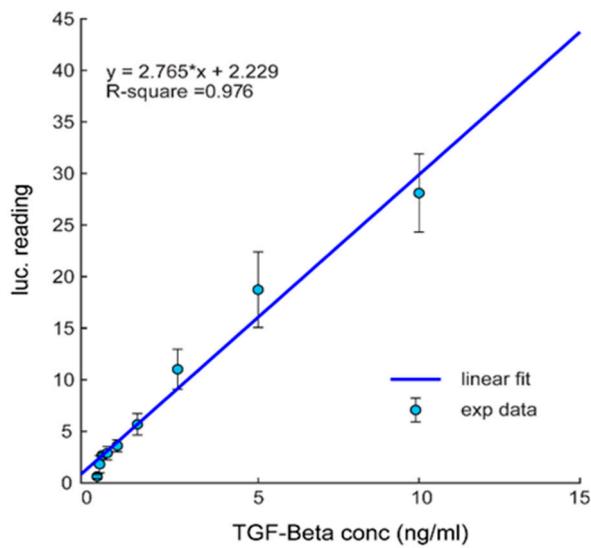

Figure S1: Standard curve for recombinant TGF- β protein response using CCL64 PAI assay is shown.

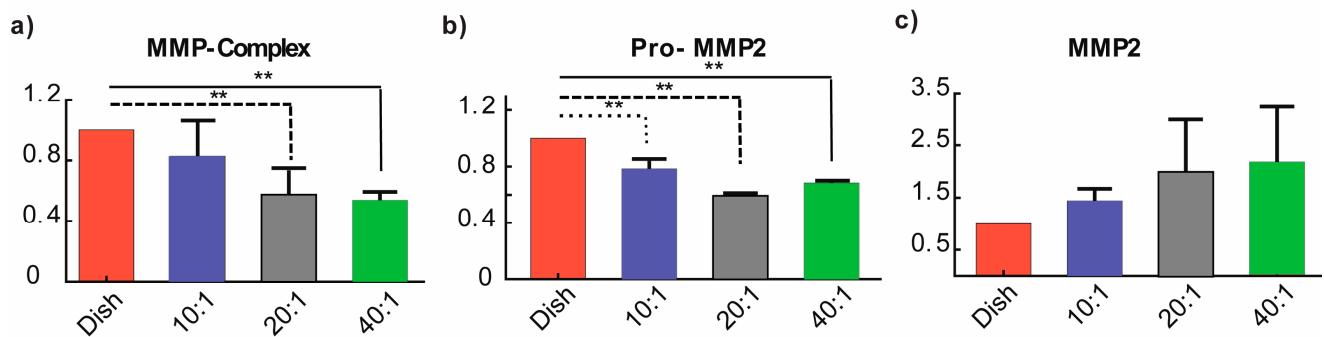

Figure S2: Quantification of Gelatin zymography images (Fig. 2d) with condition media collected from cells cultured on dish, 10:1 (1.58 MPa), 20:1 (351 kPa) and 40:1 (41.89 kPa) PDMS substrates were assayed for MMP-Complex, Pro-MMP-2 and MMP-2. Data are represented as mean \pm SEM; * $p < 0.05$; ** $p < 0.01$.

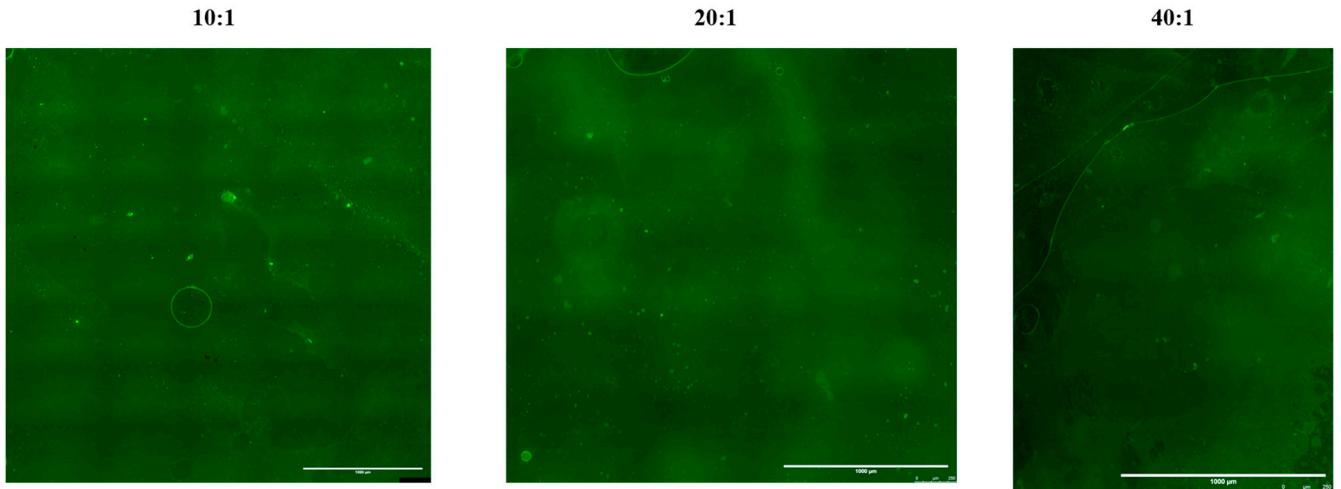

Figure S3. Tile scan images taken in a live cell fluorescent microscope showing uniform coating of fluorescently tagged fibronectin on PDMS substrates with different stiffness (10:1, 20:1, 40:1).

Supplementary Table

Table S1: Primers used in the study are indicated.

Gene	Sequence
