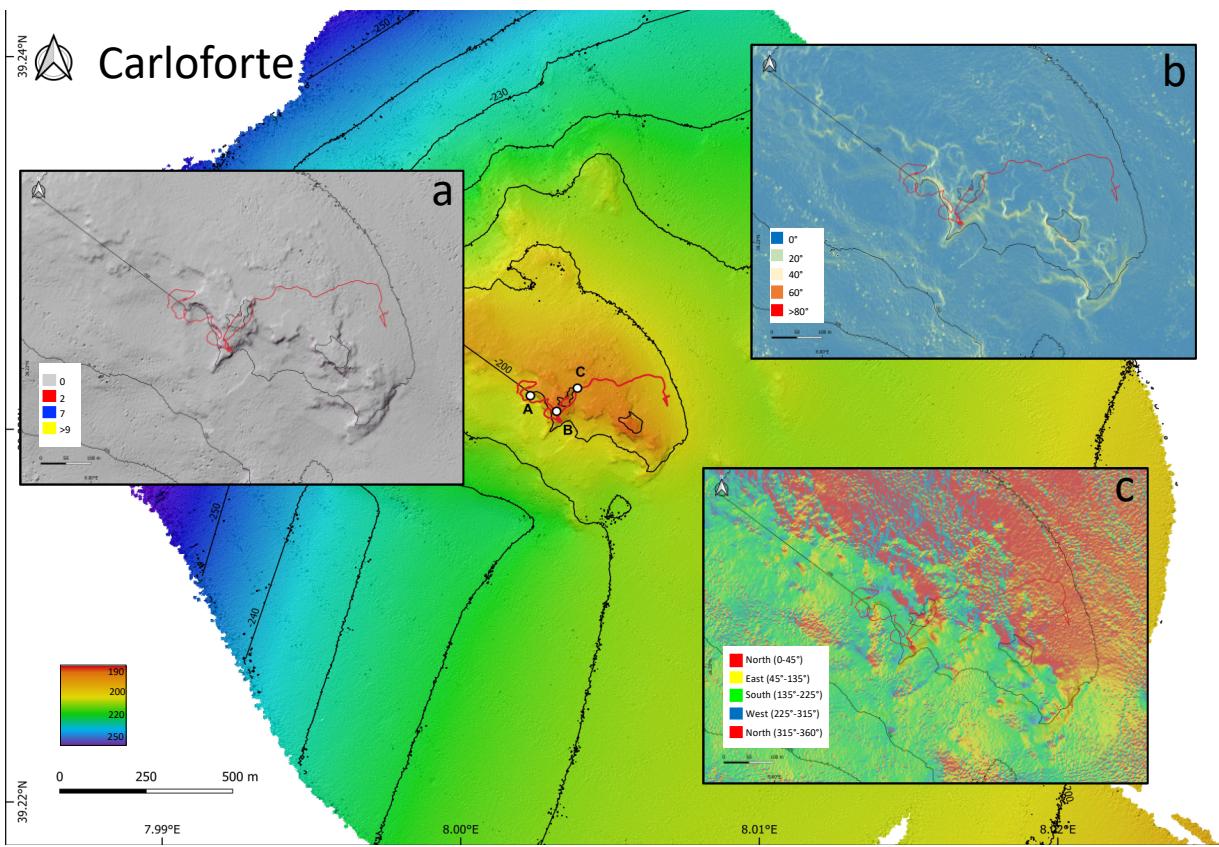

Figure S1. Bathymetric, TRI (a), Slope (b) and Aspect (c) map of the study areas from MBES data, showing the ROV navigation tracks (red lines), the sites ID and the approximate location of the 200-m long (A, B, C) transects extracted for the quantitative analyses and application of MACS index.

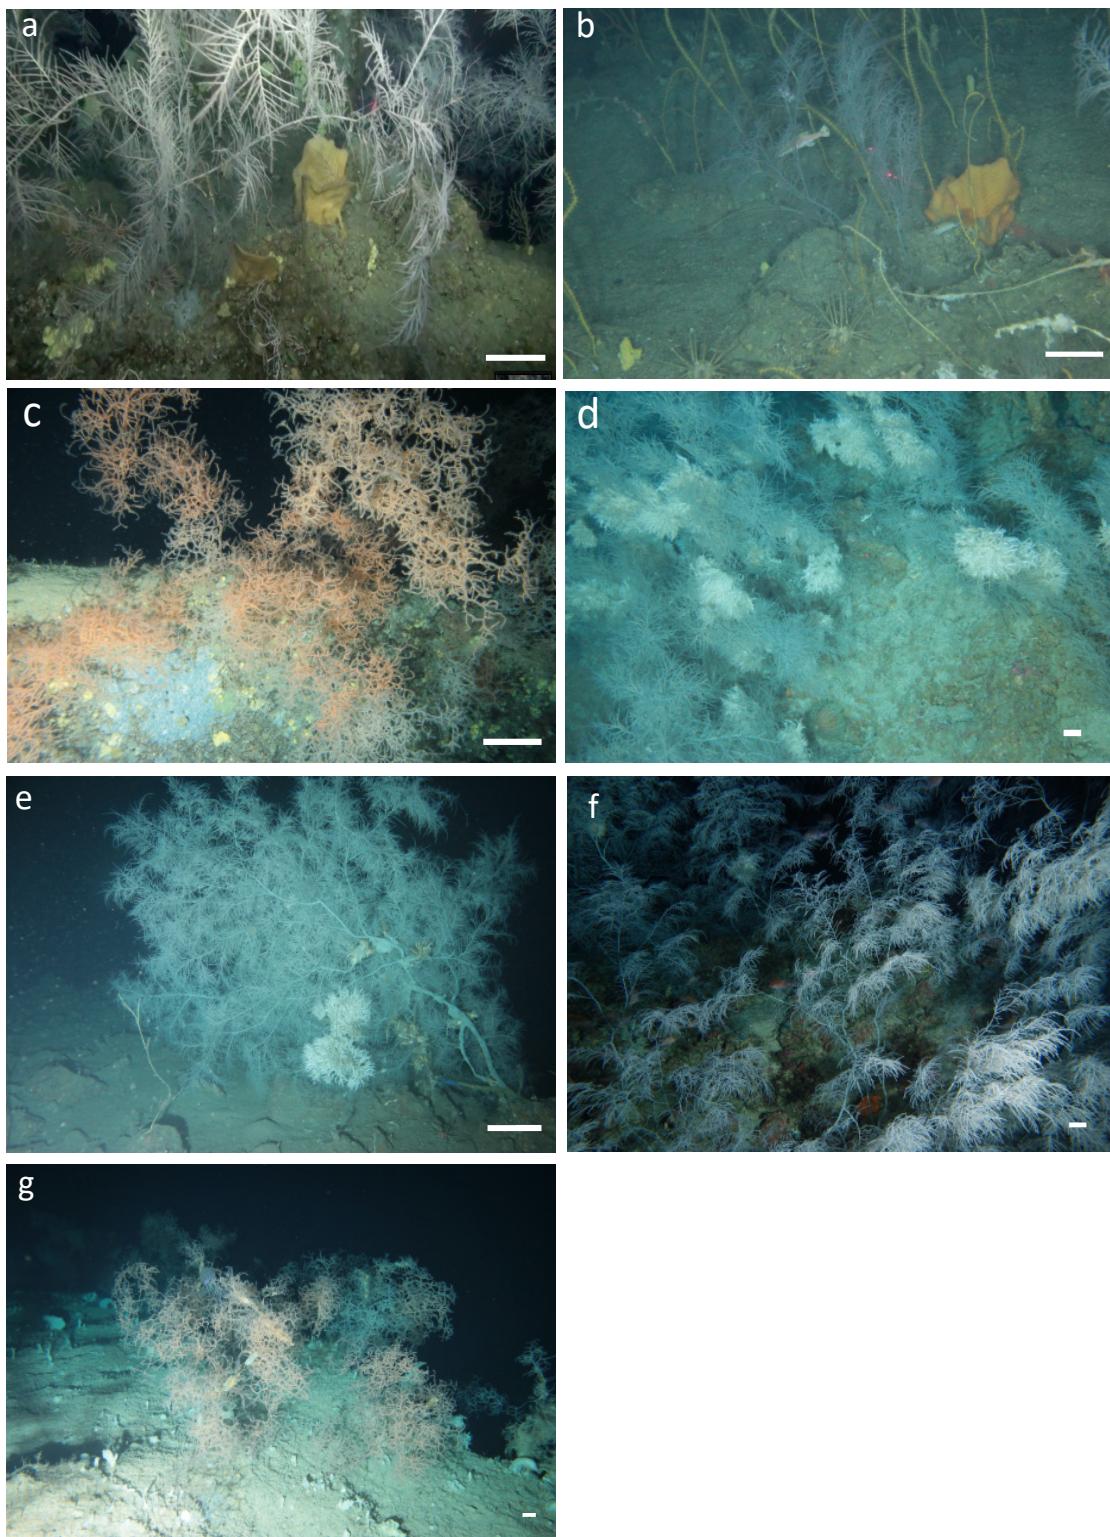

Figure S2. Selected ROV images showing black corals colonies at the seven investigated sites. (a) Colonies of *A. subpinnata* observed in Caprera site at 144m depth with colonies of *E. cavolinii* and *P. compressa* underneath the canopy; (b) colonies of *A. subpinnata* in Olbia site at 133m dwell with a dense facies of *V. flagellum*; (c) colonies of *L. glaberrima* on encrusted rocky boulder in Tavolara site at 177m depth; (d) colonies of *A. subpinnata* in Orosei site at 98m depth with several portions of the branches covered by *Salmicina-Filigrana implexa*; (e) big colony of *A. subpinnata* in Arbatax site at 140m depth with portions covered by the epibionts *Salmicina-Filigrana implexa* and other polychaetes species; (f) thick forest of *A. subpinnata* in Porto Corallo site at 95m depth with few individuals of *A. anthias* swimming underneath the canopy; (g) colonies of *L. glaberrima* in Carloforte site at 184m depth with capsules of *S. caniucla* hanging over the branches. Scale bar of approximately 10 cm.

Table S1: Geographic and geomorphological characteristics of ROV dives performed in the seven investigated sites. TRI: Terrain Ruggedness Index, TPI: Topographic Positioning Index.

Site	Transects code	Coordinates				Length (m)	Depth (m)	Average	Average	Average	Prevalent
		Start		End				Slope	TRI	TPI	Aspect

Table S2. A) Reference scores developed for the 12 components used in the MACS index. H, height; GL, general litter; LFG, lost fishing gears. B) Scores defining the environmental status classes for Is, Ii and MACS. Both tables are from Enrichetti et al. (2019).

A)

Components	Score 0	Score 1	Score 2	Score 3
Index of Status (Is)				
Species richness (SR)	0	≤ 20	$>20 \leq 40$	>40
Basal bio-cover (BC)	0	<1.5	$\geq 1.5 < 2.5$	≥ 2.5
Coralline alga cover (CC)	0	<1.5	$\geq 1.5 < 2.5$	≥ 2.5
Dominance of structuring species (DM)	$SSD \leq 0.5 \text{ org m}^{-2}$	1 sp.	2 sp.	$\geq 3 \text{ spp.}$
Density of all structuring species (SSD)	$SSD \leq 0.5 \text{ org m}^{-2}$	≤ 2	$>20 \leq 5$	>5
Mean height of dominant structuring species (SSH)	$SSD \leq 0.5 \text{ org m}^{-2}$	$\leq 1/3 \text{ of } 1/2 \text{ max H}$	$> 1/3 \leq 2/3 \text{ of } 1/2 \text{ max H}$	$> 2/3 \text{ of } 1/2 \text{ max H}$
Index of Impact (Ii)				
Sedimentation (S)	0	<1.5	$\geq 1.5 < 2.5$	≥ 2.5
Percent of entangled colonies (ENT)	0	≤ 20	$>20 \leq 40$	>40
Percent of necrotic colonies (ENT)	0	≤ 20	$>20 \leq 40$	>40
Percente of epibioneted colonies (EPB)	0	≤ 20	$>20 \leq 40$	>40
Density of litter items (LD)	0	≤ 0.1	$>0.1 \leq 0.2$	>0.2
Litter typology (LT)	Absence of litter	Presence of GL	Presence of LFG	GL+LFG

B)

Index of Status (Is)	Index of Impact (Ii)	MACS
$\leq 35 = \text{Bad}$	$\leq 35 = \text{Bad}$	$\leq 35 = \text{Bad}$
36-45 = Poor	36-45 = Poor	36-45 = Poor
46-55 = Moderate	46-55 = Moderate	46-55 = Moderate
56-65 = Good	56-65 = Good	56-65 = Good
$\geq 66 = \text{High}$	$\geq 66 = \text{High}$	$\geq 66 = \text{High}$

Table S3. List of species recorded within the investigated sites.

Phylum	Species	Caprera	Orosei	Arbatax	Olbia	Porto Corallo	Tavolara	Carloforte
Porifera	<i>Aplysina spp.</i>		+			+		
	<i>Axinella spp.</i>	+	+	+	+	+	+	
	<i>Haliclona spp.</i>							+
	<i>Encrusting orange spongia</i>			+	+			
	<i>Encrusting white spongia</i>			+	+			
	<i>Encrusting blue spongia</i>			+				
	<i>Encrusting gray spongia</i>					+
