Figure S1: NCAM2 interacts with Actin. (A) NCAM2.1 and Actin interaction detection by Western-blot after co-immunoprecipitation experiments from P10-P15 mouse cortex and hippocampal protein extracts. Actin was detected after NCAM2.1 immunoprecipitation. (B) Quantification of Actin signal detected in WBs from (A). *** $p \leq 0.0001$; one-way ANOVA using Tukey comparison post-test.

Table S1: NCAM2 interactome. Proteins identified by LC-MS/MS in the NCAM2 immunoprecipitated samples obtained with False Discovery Rate $\leq 0.01\%$. The table shows the proteins, the number of different peptides (Ptd) and the coverage of these proteins.

Table S2: Mass spectrometry results. Proteins identified by LC-MS/MS in the NCAM2 immunoprecipitated samples obtained with False Discovery Rate $\leq 0.01\%$ and detected with two or more peptides. The table shows the proteins detected with different peptides (Ppts) in the different experiments and with different antibodies. Proteins in red were detected using different antibodies (against extracellular domain of NCAM2 detecting both isoforms or against the intracellular domain of NCAM2.1); * marks proteins found in two different and independent experiments. Seven proteins were detected with both criteria.

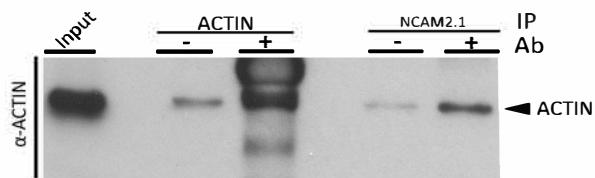

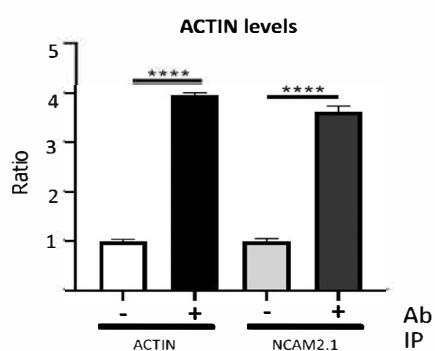

Table S3: Gene Ontology (GO) terms enriched for Biological Process in the NCAM2 interactors. The table shows the GO term identifier, the term description, the number of genes observed, the background gene camp, the False Discovery Rate, the list of the matching proteins in the network (IDs) and the list of the matching proteins in the network (labels).

Table S4: Gene Ontology (GO) terms enriched in Molecular Function in the NCAM2's interactors. The table shows the GO term identifier, the term description, the number of genes observed, the background gene camp, the False Discovery Rate, the list of the matching proteins in the network (IDs) and the list of the matching proteins in the network (labels).

Table S5: Gene Ontology (GO) terms enriched in Cellular Components. The table shows the GO term identifier, the term description, the number of genes observed, the background gene camp, the False Discovery Rate, the list of the matching proteins in the network (IDs) and the list of the matching proteins in the network (labels).

Table S6: The Kyoto Encyclopedia of Genes and Genomes (KEGGs) pathways terms enriched. The table presents the KEGGs identifier, the term description, the number of genes observed, the background gene camp, the False Discovery Rate, the list of the matching proteins in the network (IDs) and the list of the matching proteins in the network (labels).

Table S7: The Reactome pathways enriched. The table presents the Reactome pathways identifier, the term description, the number of genes observed, the background gene camp, the False Discovery Rate, the list of the matching proteins in the network (IDs) and the list of the matching proteins in the network (labels).
