

Figure S1

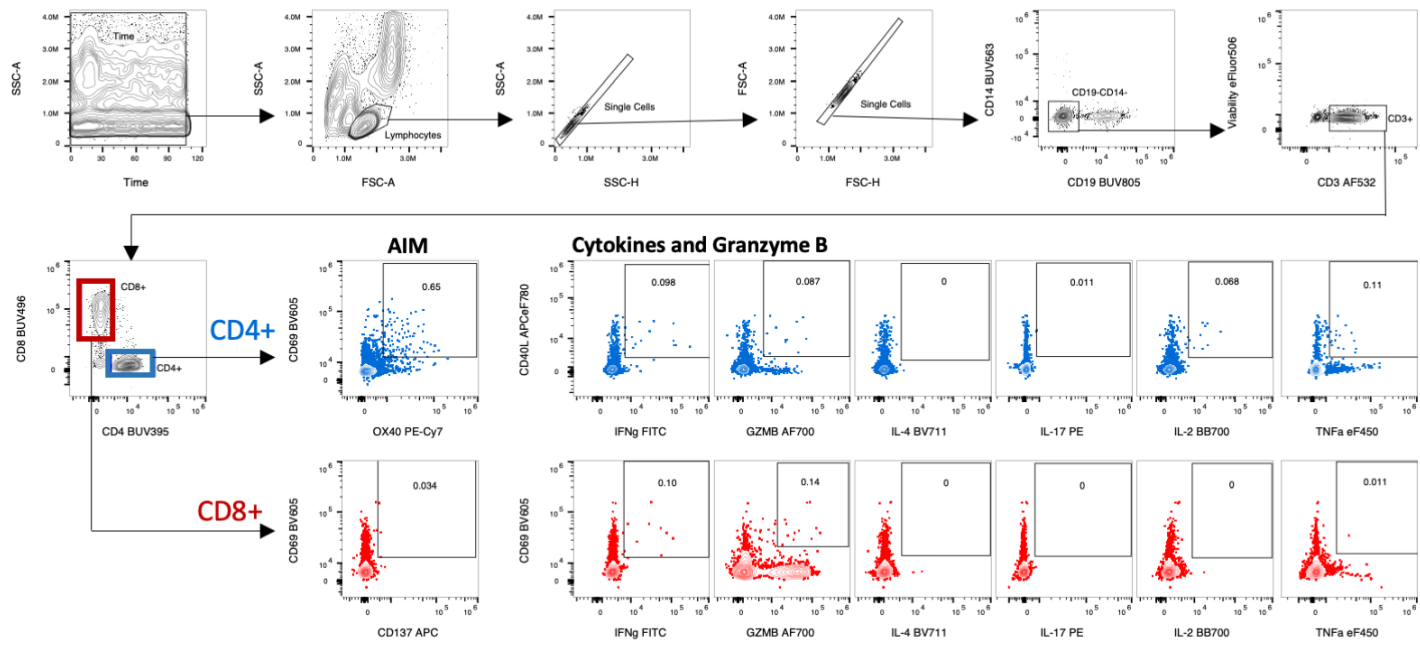

Figure S1. Gating strategy for AIM + ICS assay
The combined AIM + ICS assay was utilized for this study and a representative mild acute COVID-19 donor is shown for the gating strategy. In brief, the cells are sequentially gated for time, lymphocytes, singlets, and CD14-CD19-. Then CD3+ T cells are further gated on CD4+ or CD8+ T cells in order to define populations of AIM+, and cytokines or Granzyme B.
