

**Supplementary Text: The unit conversion formulas of each lipid profile**

Total cholesterol, high-density lipoprotein, low-density lipoprotein:  $1 \text{ mmol/l} = 38.7 \text{ mg/dl}$

Triglyceride:  $1 \text{ mmol/l} = 88.6 \text{ mg/dl}$

**Figure S1. Funnel plots of lipid profiles**

The funnel plots show no obvious asymmetry, suggesting low risk of publication bias.

HDL=high-density lipoprotein, LDL=low-density lipoprotein, TC=total cholesterol,

TG=triglyceride, WMD=weighted mean difference

**Figure S2. Funnel plots after trim and fill for total cholesterol**

TC=total cholesterol, WMD=weighted mean difference

Cardiometabolic disease	0.052, 0.553	-0.079, 0.594	0.041, 0.542	0.093, 0.451

AHI=apnea-hypopnea index; CPAP=continuous positive airway pressure; ESS=Epworth Sleepiness Scale; HDL=high-density lipoprotein,

LDL=low-density lipoprotein, TC=total cholesterol, TG=triglyceride, WMD=weighted mean difference

We meta-regressed one variable at a time. Each  $\Delta$ lipid profile was calculated as the endpoint minus baseline values.

Cardiometabolic disease was defined as resistant hypertension, coronary artery disease, or diabetes. Obesity was defined based on the studies in which mean BMI  $\geq 30$  kg/m<sup>2</sup>.
