^a Comparison between prior to surgery and 6 months after surgery for entire cohort.^b p values were calculated using McNemar's test for categorical variables and Wilcoxon signed – rank test for non-normally distributed variables and ordinal data.^c Bold values denote statistical significance (p < 0.05).

PEI: Pancreatic exocrine insufficiency; PERT: Pancreatic enzyme replacement therapy; IQR: Interquartile range; BMI: Body mass index; DM: Diabetes Mellitus; NSAID: Non-steroidal anti-inflammatory drug; DPPHR: Duodenum-preserving pancreatic head resection; PD: Pancreaticoduodenectomy.
