

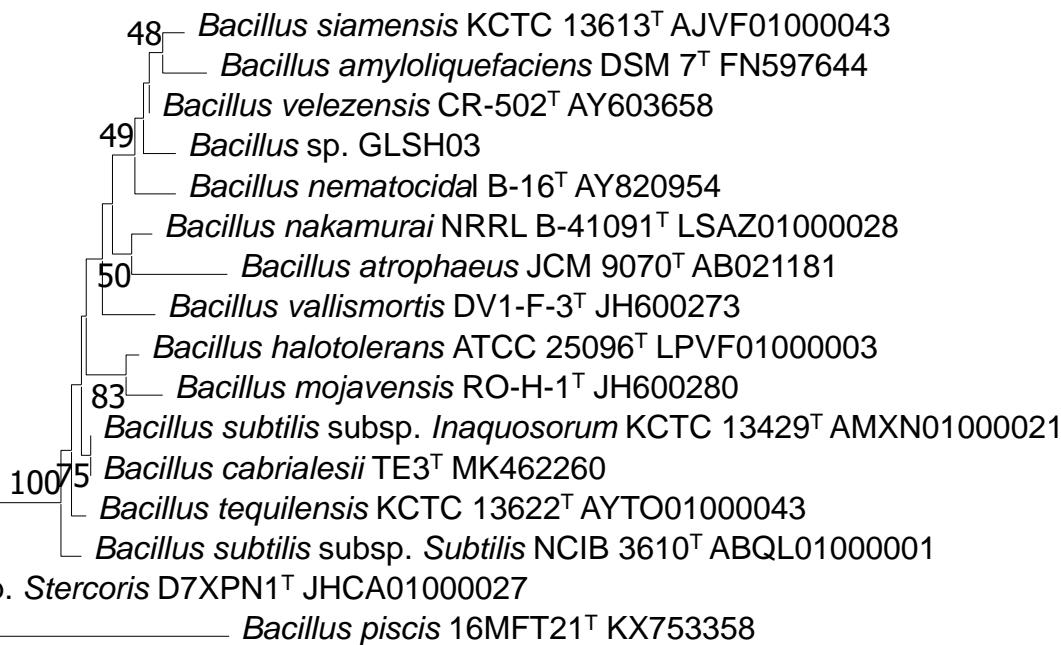

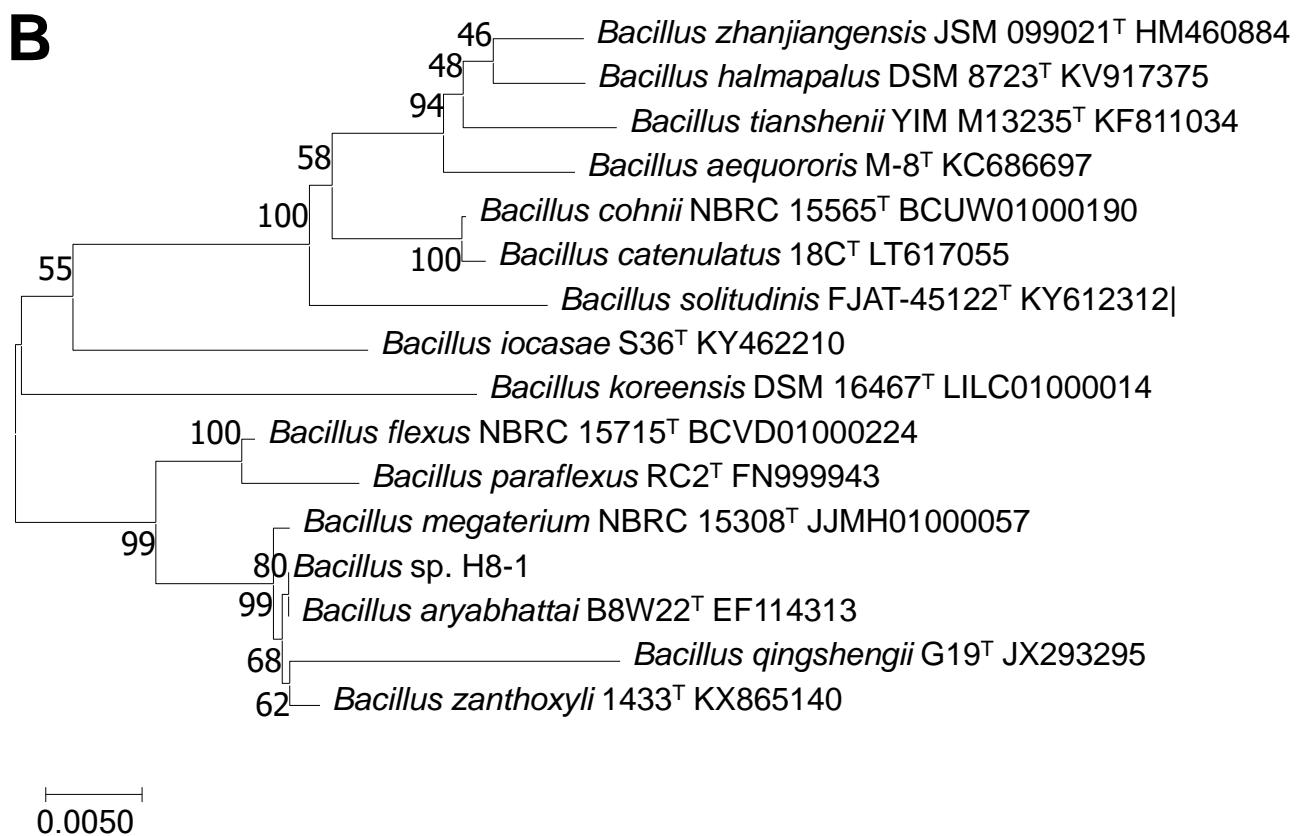

Figure S1. Disease incidence (A) and AUDPC (B) caused by *Clavibacter michiganensis* subsp. *michiganensis* (*Cmm*) in tomato plant. The bacterial supernatants and *Cmm* suspension were treated into pots. An asterisk on the bar mean statistical difference compared to medium by LSD ($P < 0.05$) and error bars indicate standard errors (three replicates of 8 plants per treatment).

A**B**

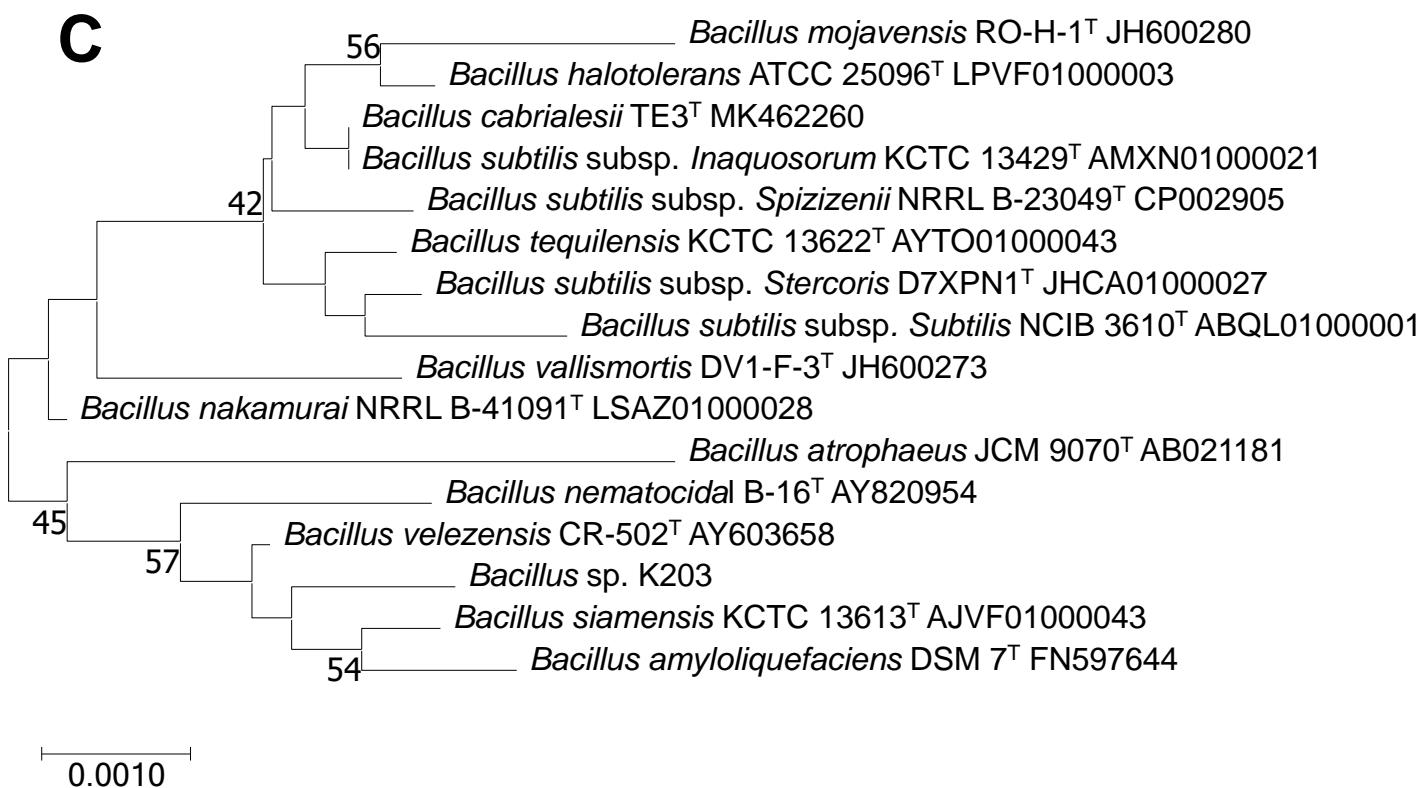

C

Figure S2. Phylogenetic trees composed by neighbor-joining method based on 16S rRNA sequences of strains GLSH03 (A), H8-1 (B), K203(C) Bootstrap values based on 1,000 replications are shown at the branch points.

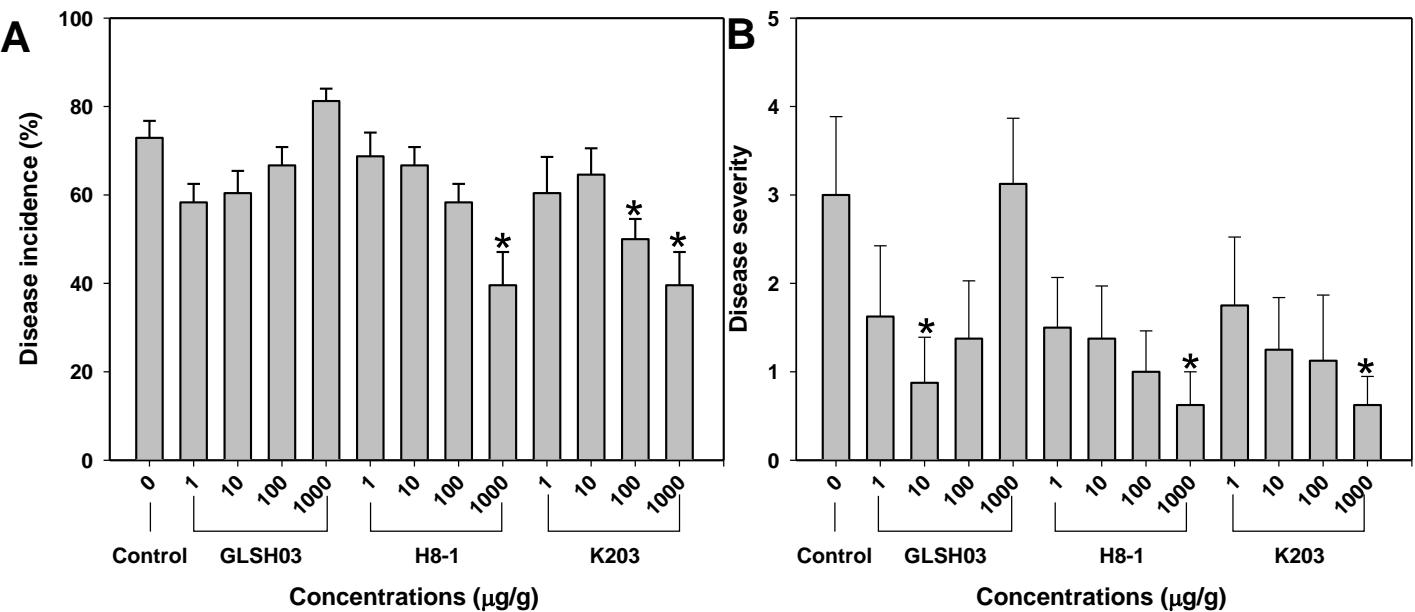

Figure S3. Disease incidence (A) and severity (B) caused by *Clavibacter michiganensis* subsp. *michiganensis* (*Cmm*) in tomato plant. The mixtures of filtered water extracts and *Cmm* suspension were treated into pots (final concentration : Water extract, 1, 10, 100 and 1,000 $\mu\text{g/g}$ of soil, *Cmm*, 10^9 cfu/g of soil). An asterisk on the bar mean statistical difference compared to control by LSD ($P < 0.05$) and error bars indicate standard errors (three replicates of 8 plants per treatment).

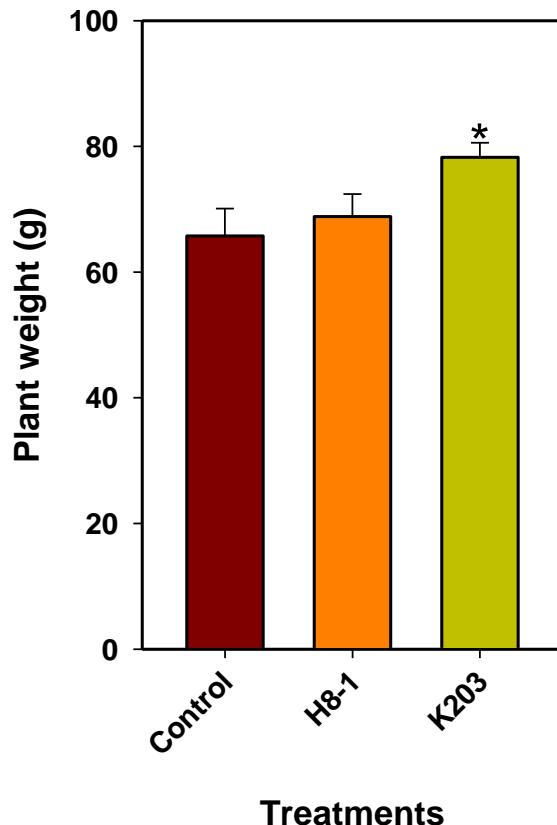

Figure S4. Shoot weight (g plant^{-1}) after treatment of the bacterial water extract. An asterisk on the bar mean statistical difference by LSD ($P < 0.05$) and error bars indicate standard errors (three replicates of 8 plants per treatment).

Days after inoculation

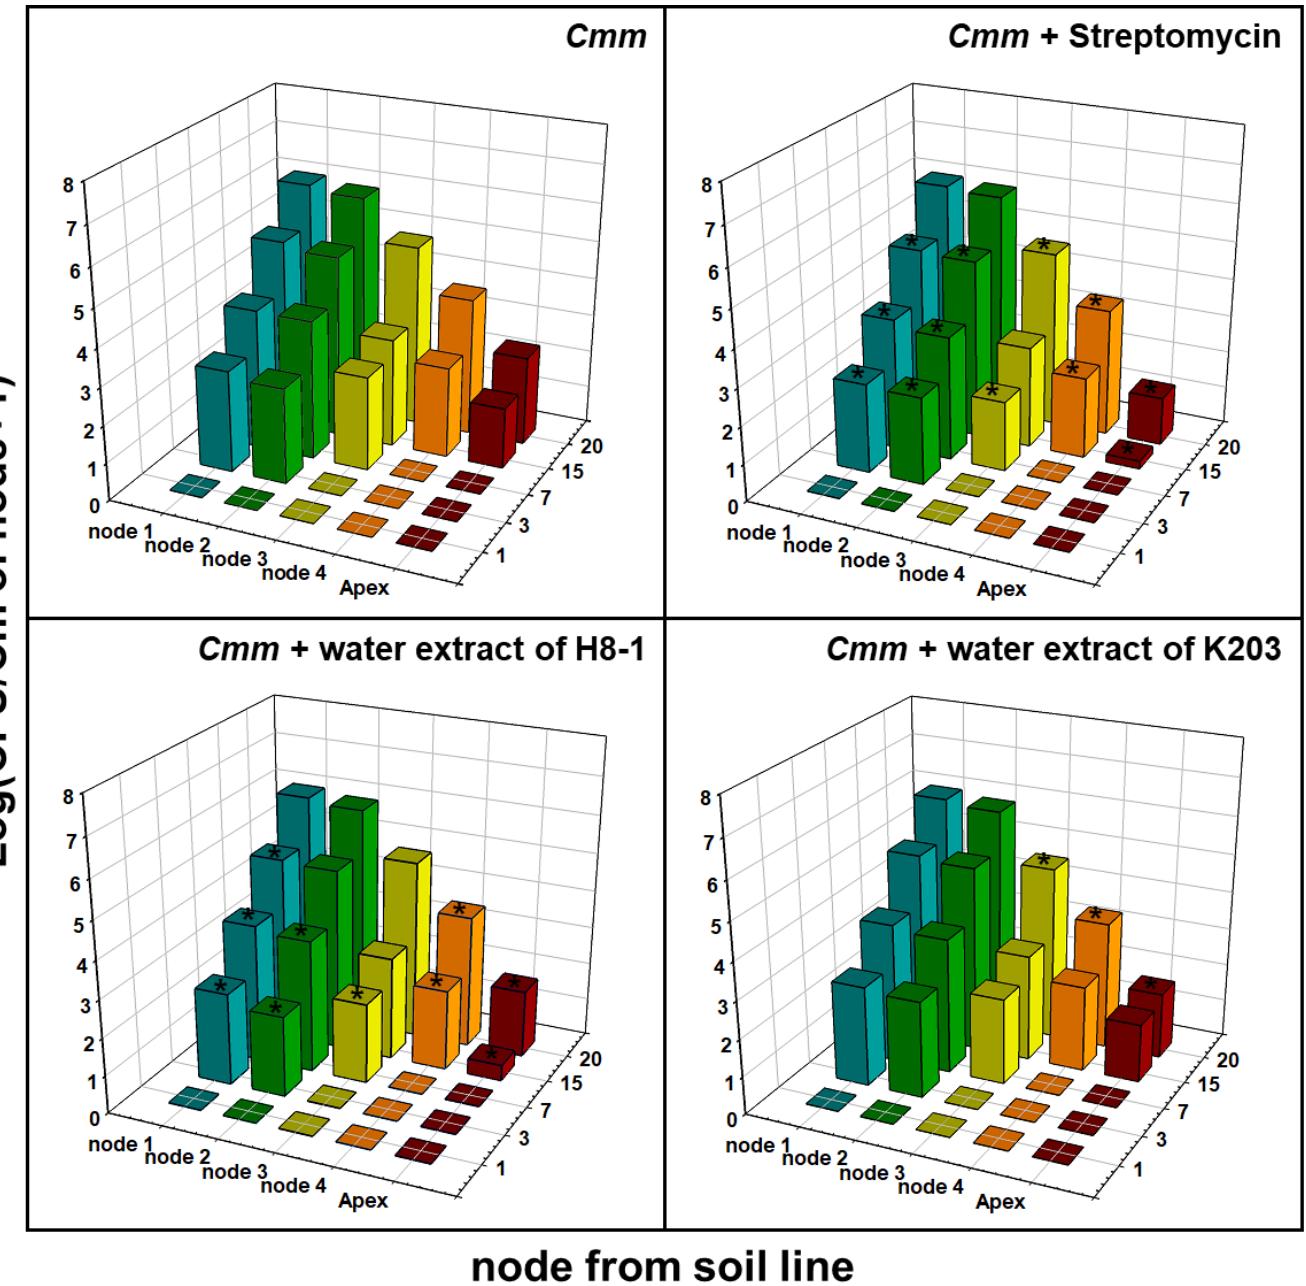

Figure S5. Colonization of *Clavibacter michiganensis* subsp. *michiganensis* (*Cmm*) in tomato plants. Stem segments were homogenized, and cultured on bacterial canker of tomato (BCT) medium. An asterisk on the bar means significant statistical difference compared to control by LSD ($P < 0.05$) ($n=10$).

Table S1. API 50CH tests of strains K203, H8-1 and GLSH03 at 24 hours

Component	K203	H8-1	GLSH03
control			
glycerol	±	±	±
erythritol	±	-	-
D-arabinose	-	-	-
L-arabinose	±	±	±
