Values are shown as mean±stdv. p-Values refer to main effects of time, group and time*group interactions (two-way mixed ANOVA). Significant effects are shown in bold. In case of significant overall time effects, Bonferroni-corrected post hoc analyses were performed individually for groups, whereby asterisks indicate

significant differences to pre (t1). *** (p<0.001); ** (p<0.01); * (p<0.05). CON (control group = observation only); RP (recommended protein group); HP (high protein group).
