Message from the Guest Editors

The rapidly increasing global population, rapid changes in the regional and global climates making crop production more challenging. However, the benefits of integrated crop management are largely influenced by the environment, soil type and fertility, and crop type. Mono-cropping systems or the use of the same crop rotation lead to reduced soil quality, favoring insect pests' infestation. Combination of exhaustive and restorative crops in rotation as well as in intercropping and relay cropping improves soil quality, crop nutrition, sustains crop production, and ultimately leads to higher net returns. Therefore, the benefits of integrated crop management should be considered on a long-term basis, not for the short-term yield response. This SI will focus on the impacts of integrated crop management practices on soil health, crop productivity, and a reduction in the impacts of expected climate changes on crop production in a sustainable manner. Research and review articles focusing on any of the above-described aspects will be gladly considered in this SI.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
