Message from the Guest Editor

Plants are threatened by a diversity of pathogen species living in complex communities, including various other non-pathogenic microorganisms. The natural microorganism communities inhabiting the plant phyllosphere or the rhizosphere also include non-pathogenic members that have protective effects against pathogens. These beneficial species can also confer the plant with better immunity against environmental stresses. The plant's pathobiome comprises a collection of co-existing phytopathogens that affect each other and the host plant's health. They are formed by pathogens inhabiting the same ecological niche and either cooperating or competing for the same plant resources. This Special Issue welcomes papers focusing on recent scientific progress and innovation in the intriguing relationships between microorganisms and their implications on the plant's immunity to biotic and abiotic stresses.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
