### Message from the Guest Editor

Dear Colleagues,

Almost 80 years ago, a scientist named Harold Flor proposed the theory of “gene-for-gene” plant resistance as a mechanism for plants to defend against microbial infections. Since that time, many such models have been reported, and in the process, the molecular mechanisms controlling these resistance responses have been characterized. Nevertheless, numerous cases of plant disease response remain uncharacterized, particularly plant disease resistance responses that cannot be explained by a single gene-for-gene response. In this Special Issue, we hope to provide a platform for scientists to report new findings in plant-microbe interactions, with a particular emphasis on quantitative plant resistance.

Dr. John Henning

## **Message from the Editor-in-Chief**

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
