Message from the Guest Editor

Dear Colleagues,

This special issue aims to highlight the recent advancements in the pathogenesis, epidemiology, diagnosis, and antimicrobial management of Gram-negative bloodstream infections. The morbidity and mortality of Gram-negative bloodstream infections have heavy burden on the general public and special populations such as immune compromised hosts. Increasing antimicrobial resistance rates limit both empirical and definitive antimicrobial treatment options. Utilization of novel antimicrobial agents and cutting-edge treatment strategies through experimental and clinical therapeutics may improve clinical outcomes and advance this field. Evolution of rapid diagnostics for early identification of bloodstream isolates as well as genotypic and phenotypic antimicrobial susceptibility testing provide opportunities for clinicians and researchers and hope for patients in a better future.

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1
(*General Pharmacology, Toxicology and Pharmaceutics*)
