**Prof. Dr. Roberto Venanzoni**

**Dr. Giustino Orlando**

Deadline for manuscript  
submissions:

**closed (16 December 2021)**

### **Message from the Guest Editors**

Dear Colleagues,

The increased emergence of antimicrobial-resistant pathogens is a major healthcare problem worldwide. It is estimated that antimicrobial resistance contributes annually to approximately 700,000 deaths across the world.

Plants and fungi offer exceptional chemical diversity with a wide variety of biological activities and thus are the most promising sources for drug discovery and development.

The aim of this Special Issue is to present the status of and future trends in natural products from plants and fungi with antimicrobial properties (i.e., antibacterial, antifungal, antiviral). Other suitable topics are methods for increase in metabolite yield (e.g., bioelicitation) and investigation of genetic bases in metabolite production. Alternative use of plants and fungal compounds and extracts with antimicrobial activities in food, beverage, supplements, and cosmetic may also be part of this Special Issue.

The Special Issue may include research papers and reviews on the antimicrobial properties of extracts and/or new metabolites from plants and fungi, a dynamic field at the intersection of microbiology, biotechnology, pharmacology, and biology.

## Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciples are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1  
(*General Pharmacology, Toxicology and Pharmaceutics*)
