Message from the Guest Editor

Dear Colleagues,

In the last two decades, implant-prosthetic therapy has seen a considerable growth due to the development of new dental implant systems and minimally invasive implant techniques, the improvement of materials and techniques used in the rehabilitation of the implant sites, the use of the digital techniques used in the virtual planning of the implant-prosthetic therapy, as well as the emergence of 3D navigation systems and haptic robotic technology used to assist the surgical implant procedures. These changes have expanded the range of the possibilities to plan implant procedures and prosthetic restoration design, to execute surgical implant procedures and to select restorative choices for the therapy of the edentulous patients by implant-supported fixed and removable dentures.

This Special Issue on “New Trends in Implant-Prosthetic Therapy” in *Applied Sciences* encourages high quality original research studies, clinical articles, and reviews focused on the topic of the current and future trends in implant-prosthetic therapy.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
