Message from the Guest Editors

Dear Colleagues,

Today, working environments are constantly changing, leading to the onset of new occupational hazards. In developed countries, on one side, globalization and economic crisis, new technologies and forms of employment and work organizations, as well as workforce aging pave the way to emerging physical inactivity and ergonomic stressors that increase the risks of musculoskeletal disorders, and to important psychosocial risks due to job insecurity, high workload and emotional demands that increase mental health issues. Moreover, there is an increased exposure to new chemical substances, including nanomaterials and unknown carcinogens that require new models in risk assessment and occupational epidemiology.

This Special Issue is an opportunity for the scientific community and occupational stakeholders to present research on new emerging or challenging hazards from their own countries, to give insight into new challenges in occupational health and safety practice.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
