Message from the Guest Editor

Dear Colleague,

Air quality and future climate are closely interlinked, in particular, since anthropogenic atmospheric emissions began to play a relevant role in climate variability properties. The United Nations' Intergovernmental Panel on Climate Change (IPCC) has recognized that an early cut of climate pollutants can help us to achieve a reduction of the rate of global warming and bring opportunities to human adaptive capacity, and the prevention of millions of deaths from air pollution.

However, do we know everything about air quality and its link to the future climate and vice versa?

The current Special Issue invites a broad audience, from human researchers to physical and earth scientists, as well as policymakers, to share new scientific and original studies about the interlinks between air pollution and future climate change.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
