submissions:

31 October 2024

Message from the Guest Editor

Dear Colleagues,

Biophysics is one of the most promising and innovative areas of multidisciplinary research. Spain has actively participated in its development during the last decades, from the original concept of biophysics as a branch of biology that involved physical concepts and instruments, to the current status as a consolidated area of research where Biology and Physics meet and cross-fertilize. Many Spanish groups have pioneered a physical approach to biological systems, both contributing to a deeper understanding of the physical mechanisms that underlay biological phenomena and to the pursuit of new physics in living matter. This Special Issue aims to provide a comprehensive overview of the state-of-the-art of Biophysics in Spain, ranging from the more traditional and established areas to the most innovative approaches. We invite researchers in the Spanish research system to submit full research articles or comprehensive reviews.
