Message from the Guest Editors

Dear Colleagues,

After the initial increase in activity in genetic research in cardiovascular and perioperative medicine subsided due to the complexity and large cohorts that were required, the international research community put emphasis on biomarkers. These proteins are easy to analyze, often even in the routine laboratory, and have provided increasingly valuable data in recent years, especially in the acute care and perioperative setting. In cardiovascular medicine, in particular, we have gained a better understanding of how biomarkers can be effectively used for personalized risk analysis and outcome prediction purposes. In this Special Issue, we focus on the current status and future directions in cardiovascular biomarker research and invite the international community to submit carefully developed results from this research area.

Centre, The University of
Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
