Nanomaterials Based on Bio/Chemical Sensors

Guest Editor:

Dr. Ali Othman
Department of Chemical and Biomolecular Engineering, Clarkson University, Potsdam, NY, USA

Deadline for manuscript submissions:
closed (31 July 2022)

Message from the Guest Editor

With the increased use of nanotechnology in many fields including sensors, bioanalytical, medical diagnosis devices, environmental, and emerging applications, there is a great demand for the fabrication of novel nanoscale materials to enhance their physicochemical, catalytic, and electronic properties as well as the overall sensing device performance. Nanomaterials, nanocomposites and hybrid materials, including metals and metal oxide nanoparticles, quantum dots, carbonous (e.g., graphene, graphene oxide, and carbon nanotubes), polymeric, metal organic frameworks (MOFs) and supramolecular have been successfully integrated into fabrication of bio/chemical sensors, which has led to a rapidly expansion of these materials in many applications. Current efforts in the fabrication, functionalization and engineering of these nanomaterials focus on the tuning and tailoring of their physicochemical, spectroscopic, electrical, mechanical, and thermal properties, which can significantly enhance the sensitivity, stability, selectivity, and performance of the bio/chemical sensors for various applications.

CITESCORE 3.9

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Nicole Jaffrezic-Renault

Institute of Analytical Sciences, UMR CNRS 5280, Department LSA, 5 Rue de La Doua, 69100 Villeurbanne, France

Message from the Editor-in-Chief

Chemosensors is an international, scientific, open access journal on the science and technology of chemical sensors published by MDPI. All articles are released on the internet immediately following acceptance. The journal publishes reviews, regular research papers, and communications. The scope of Chemosensors includes:

New chemical sensors design

Electrochemical devices, potentiometric sensor, redox electrode

Optical chemical sensors

Analytical methods

Environmental monitoring

Gas detectors

electronic nose, etc.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q1 (*Instruments & Instrumentation)* / CiteScore - Q2 (*Analytical Chemistry*)
