Message from the Guest Editors

Dear Colleagues,

Advances in microfluidics are revolutionizing life sciences and (bio)chemistry. Microfluidics enable environmental control in miniaturized reaction spaces and can be used for massively parallelized or accelerated analyses. Nonetheless, the application of microfluidics is often limited by analytical capabilities for detecting and quantifying analytes with the necessary sensitivity, specificity, and selectivity. Novel and innovative in situ approaches for the multimodal sensing of biological and chemical processes in the microspace are now emerging to keep pace with the rapid developments in microfluidics.

The Special Issue aims to collect recent findings and advances in the quantitative sensing of analytes in microfluidic reaction environments. Researchers are invited to contribute research and review articles, as well as short communications, encompassing the broad range of disciplines from life science to chemistry.

Special Issue

Message from the Editor-in-Chief

Chemosensors is an international, scientific, open access journal on the science and technology of chemical sensors published by MDPI. All articles are released on the internet immediately following acceptance. The journal publishes reviews, regular research papers, and communications.

The scope of *Chemosensors* includes:

New chemical sensors design

Electrochemical devices, potentiometric sensor, redox electrode

Optical chemical sensors

Analytical methods

Environmental monitoring

Gas detectors

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [CAPus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q1 (*Instruments & Instrumentation*) / CiteScore - Q2 (*Analytical Chemistry*)
