

Advances in Surface Modification and Coatings of Wood and Wood Composites

Guest Editor:

Prof. Dr. Pavlo Bekhta

Department of Wood-Based
Composites, Cellulose and Paper,
Ukrainian National Forestry
University, 79057 Lviv, Ukraine

Deadline for manuscript
submissions:

closed (31 March 2024)

Message from the Guest Editor

Dear Colleagues,

Wood is still used extensively across many industries, despite its disadvantages, including dimensional instability, susceptibility to biodegradation and ability to burn. One of the areas that can improve these properties, and therefore expand the scope of its application, is wood modification. Different methods of wood modification have been, and continue to be, developed. Particular focus areas include thermo-mechanical modification, plasma treatment, modification with new polymers and nanomaterials, antifungal and fire-retardant modification of wood surface, etc. Another area is wood finishing, the purpose of which is to protect wood from external factors, to preserve its decorative properties or to enhance its beauty. New eco-friendly coating systems are offered, including coatings containing nanoparticles; bio-based additives derived from cellulose, lignin or other natural polymers; coating products with bio-protection or fire-protection effects, etc.

I invite authors to contribute to this Special Issue in the form of full research articles, communications, or reviews.

Editors-in-Chief

Message from the Editorial Board

Now more than ever, research is called for to produce technologies and improve knowledge to solve the major challenges faced by our society. The development of new materials and devices for (without the ambition to be exhaustive) energy, health and food technology, together with the need for establishing processes that reduce the impact on critical resources and the environment, is indeed at the center of most contemporary research. Surface science and engineering play a key role in this regard. Refining surfaces and their modifications provides new materials, architectures and processes with a huge potential to aid most societal challenges. *Coatings* is a well-established, peer-reviewed, online journal that focuses on the dissemination of publications in the field of surface science and engineering. *Coatings* publishes original research articles that report cutting-edge results and review papers on the hottest topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Materials Science, Coatings & Films*) / CiteScore - Q2 (*Surfaces and Interfaces*)
