Message from the Guest Editors

The aim of this Special Issue regarding is to report the recent innovations regarding the full diagnosis and management of the wide spectrum of thyroid malignancies.

Research areas may include (but not limited to) the following:

- Novelties in pre operative ultrasound diagnosis of thyroid malignancy.
- Early diagnosis of thyroid malignancy.
- Microcarcinomas of thyroid gland, diagnosis and management.
- Medullary thyroid carcinomas diagnosis in the grey zone of serum calcitonin level.
- Optimal management of malignant lymphoma, anaplastic carcinomas of thyroid gland.
- Metastases to thyroid gland.
- Surgical treatment modalities in thyroid oncology.
- Radiation therapy novelties.
- Medical therapy novelties in aggressive thyroid tumors.
- Percutaneous thermal ablative techniques, past present and future.

We look forward to receiving your contributions.
