Message from the Guest Editor

Dear Colleagues,

Most marine invertebrates have planktonic larval and benthic adult stages. The larvae of benthic invertebrates compose the meroplankton in the zooplankton community. The development, biology, and ecology of meroplankton can subsequently affect the recruitment and sustainability of adult populations. The present topic covers different aspects of larval biology of invertebrates, including diversity, phylogeny, morphology, development, settlement, and recruitment.

Message from the Editor-in-Chief

Diversity (ISSN 1424-2818) is a scholarly journal that covers all areas of diversity research. Our distinguished editorial board and refereeing process ensures the highest degree of scientific rigor for publishing. Original research articles and timely reviews are released online, with unlimited free access.

We invite papers and reviews on multidisciplinary topics of diversity that bridge organismic diversity (systematics, biodiversity, phylogeny, population genetics, and evolution) and molecular diversity (phytochemistry and biophysics).

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [AGRICOLA](#), [GEOBASE](#), [CAPlus / SciFinder](#), and many other databases.

Journal Rank: [JCR - Q2 \(Biodiversity Conservation\)](#) / [CiteScore - Q2 \(Agricultural and Biological Sciences\)](#)
