Deadline for manuscript
submissions:

1 September 2024

Message from the Guest Editors

- In burn care, the evidence for and, therefore, the broader use of rehabilitation methods is less well developed. So, we'd like to invite authors to submit comprehensive or systematic literature reviews that rigorously evaluate research questions, particularly those related to the effectiveness of early rehabilitative interventions in burn care. These reviews should focus on strategies aimed at minimizing long-term morbidity and enhancing the quality of life for burn survivors. Furthermore, we seek original research reports featuring high-quality study designs that explore the breadth of post-burn rehabilitation interventions. Contributions may include but are not limited to, empirical studies of psychological and physical treatments administered at any stage following a burn injury.
