Message from the Guest Editors

Dear Colleagues,

This Special Issue aims to collect excellent papers either considering a qualitative or a quantitative approach to the topics of macroeconomic stability, the stability of the financial system, or the activities undertaken by central banks and governments to achieve macroeconomic stability in the economy by influencing various variables such as the following: inflation, unemployment, economic growth dynamics, public deficit and debt, foreign debt, and others. Methodological approaches may include tools from the field of game theory, econometric models, simulation models, and others. The expected results of the research will allow for the development of various policy suggestions as well as societal implications.
