### Message from the Collection Editors

Electronics plays an important role in all fields, especially during the wave of the fourth industrial revolution (Industry 4.0). For example, ubiquitous sensing can be achieved through remote sensing, wireless sensor networks, drone swarm, and crowdsensing. Ubiquitous computing in any device, in any location, and in any format comes true with the help of embedded computing, edge/fog computing, and cloud computing. Benefitting from artificial intelligence and big data technologies, ubiquitous intelligence makes the world smarter.
