Thessaloniki, Greece

Deadline for manuscript  
submissions:

**closed (30 December 2021)**

### Message from the Guest Editor

Dear Colleagues,

The past thirty years have seen the establishment of wholesale electricity markets on a global scale followed by an upsurge of research interest in market design and the price formation mechanism. Electricity prices have distinctive features that are dictated by the nature of power production, limitations in existing storage technologies and insufficient network infrastructure. The confluence of all these factors adds to the increasing complexity of empirical price time series, which calls for advanced modelling solutions. The purpose of this Special Issue is to present state-of-the-art approaches to power price and electricity markets modelling. The issue welcomes contributions in the wider context of electricity markets research, including econometric studies, proposals on new designs or trading protocols and agent-based simulation paradigms.

Assist. Prof. Dr. Nikolaos S. Thomaidis

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (*Engineering (miscellaneous)*)
