Advances Technologies in Solar Energy Storage

Guest Editor:

Prof. Dr. Nicolina Pop

Department of Physical
Foundation of Engineering,
Politehnica University Timișoara,
RO30223 Timișoara, Romania

Deadline for manuscript
submissions:

closed (30 November 2021)

Message from the Guest Editor

The aim of this Special Issue encompasses the ability of parametric clear-sky solar irradiance models to both estimate and accurately separate global horizontal solar irradiance into its fundamental components of beam and diffuse, increasing the accuracy of solar energy production estimation by developing clear-sky solar irradiance models tuned for properly capturing the effect of aerosols at a high concentration in the atmosphere but, also, the thermal degradation of photovoltaic (PV) cells in time. The aim of this issue is to explore a range of testing methods for such a monitoring, including scanning electron microscopy (SEM), atomic force microscopy (AFM), and nondestructive testing (NDT) involving optical coherence tomography (OCT) and hardness measurements.

The topics of interest include the development of related methods and devices (with analytical approaches, simulations, and/or experiments), their optimization, and their inclusion in dedicated systems for applications.

The forum is open to all researchers in the abovementioned fields. All types of contributions, e.g., research papers, reviews, and communications, are welcome.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Engineering (miscellaneous)*)
