Message from the Collection Editors

Dear Colleagues,

This Topical Issue of *Fire* invites Perspectives and Case Reports (syntheses and reviews) focused on ideas to transform how wildland fire governance is approached across the world. We start the Topical Issue with a Perspective that raises questions associated with taking a Tabula Rasa, or clean slate, "what if" reflection on wildfire governance. We welcome responses to that Perspective as well as additional contributions associated with the following themes:

- Perspectives on novel approaches that advance ways for coexisting (or living) with fire;
- Perspectives on local and national wildland fire policies, and how they are helping or hindering wildfire goals;
- Perspectives on what the shared stewardship of landscape fire means across the spectrum of actors;
- Perspectives on what it really means, as is so often advocated, to 'increase fire on the landscape';
- Perspectives of traditional ecological knowledge and how it can help to inform wildfire management.
