Message from the Guest Editor

Dear Colleagues,

Recent research and development on nondestructive testing technologies has brought the in-forest assessment of wood and fiber properties of standing trees into forest management, resource evaluation, harvesting operation, and efficient wood utilization. Significant values are associated with the wood and fiber quality of our forests for the production of structural lumber, engineered wood products (such as glulam, LVL, and CLT), and pulping and paper. Rapid and nondestructive measurements on trees allow this value to be captured through better silvicultural practices, as well as the allocation of resources to highest value users and application of best processing methods. This Special Issue invites papers on in-forest wood quality assessment using emerging nondestructive technologies (SilviSvan, near infrared, resistance drilling, acoustics, and 3D laser scanning).

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
