Message from the Guest Editor

Artificial intelligence (AI) is increasingly being integrated into telehealth and remote patient monitoring, and the potential benefits are substantial. This Special Issue of the journal *Healthcare* focuses on the application of AI in telehealth and remote patient monitoring, exploring the latest research, developments, and challenges in this rapidly evolving field.

One of the key advantages of AI in telehealth and remote patient monitoring is the ability to collect and analyze vast amounts of patient data in real time. AI algorithms can quickly identify patterns and anomalies in patient data, enabling healthcare providers to make more informed decisions

and intervene early when necessary. This can lead to improved patient outcomes, reduced hospital readmissions, and better overall quality of care.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

Healthcare is an international, scientific, peer-reviewed, open access journal on health care systems, industry, technology, policy, and regulation, and is published semimonthly online by MDPI. Ocular Wellness & Nutrition Society (OWNS) is affiliated with *Healthcare* and its members receive discounts on article processing charges.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, PMC, and other databases.

Journal Rank: JCR - Q2 (*Health Care Sciences and Services*) / CiteScore - Q2 (*Leadership and Management*)
