submissions:

31 July 2024

Message from the Guest Editor

Dear Colleagues,

The field of endodontics is undergoing a rapid transformation, marked by the introduction of innovative techniques and tools. While the advantages of some innovations are clear in terms of patient benefits, there remains uncertainty surrounding whether some shifts are driven by commercial interests rather than solid scientific evidence. Therefore, there is an urgent need for rigorous scientific studies that either support or refute many of the innovations gaining popularity among clinicians, with the ultimate goal of ensuring the best possible treatment outcomes for patients.

One crucial aspect that warrants attention is education. The emphasis on cultivating competent endodontists should go hand in hand with clinical research. The benefits to the population stemming from the introduction of safer and more effective techniques are only realized when adequate tools are provided to disseminate knowledge effectively.

This Special Issue aims to gather valuable scientific contributions from researchers worldwide, with the objective of enhancing evidence-based practice and education.
