Message from the Guest Editors

In the last two decades, an increasing trend toward new forms of dental practice has been observed. Although the classic model of a dental practice with only one dentist is still the most common form of practice internationally, requirements and political conditions have changed enormously. The choice of the practice model and the form of professional practice offer young dentists several options, e.g., being a self-employed intrapreneur or being an employee in one of the practice forms or working in the public health sector or in industry. Expectations for the future career of students and young dentists are diverse, with the oral health care sector shifting due to factors such as financial investors opening many large dental centers, increasing numbers of employed dentists, a possible oversupply in urban and undersupply in rural areas, and a shortage or emigration of skilled personnel.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
