Message from the Guest Editors

In addition, due to the physical effect they produce, chronic diseases also have a strong psychosocial impact on both the sufferer and his or her family members. These diseases can affect mood, quality of life, sexuality, self-esteem, interpersonal relationships, etc. Thus, it is important to establish interventions both to prevent and diagnose these diseases early and to establish care that can improve the quality of life, sexuality, moods, etc. of the people who suffer from them.

This Special Issue, entitled “Chronic Diseases: Biopsychosocial Impact, Interventions and Preventive Measures” seeks papers on new research aimed at preventing chronic diseases and identifying problems related to them and interventions to improve the health status of people who suffer from them. We also welcome high-quality systematic reviews related to these issues.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
