Message from the Guest Editor

eHealth interventions are uniquely suited for personalization and tailoring of services and information to the individual needs of users. At the same time, they can be overly complex, time-consuming, and exclusive. It is essential to learn more about eHealth services and preventive interventions, their effectiveness and implementation. Development of eHealth services not only requires a feasibility assessment and multi-disciplinary expertise, they further rely on user needs and acceptability. Diverse evaluation approaches, frameworks and tools co-exist to examine the effectiveness of eHealth that also take into account the complexity of technology. So far, little attention has been paid to the implementation of eHealth services and interventions in the real world. In this Special Issue, we aim to cover the full spectrum of eHealth-related research that includes theoretical, methodological, original qualitative and quantitative research, as well as review articles.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
