Deadline for manuscript  
submissions:

**closed (31 October 2018)**

### Message from the Guest Editor

Epidemiological research on the pathogenesis, diagnosis, and treatment of infectious diseases is a broad field of work with renewed validity in the face of social changes and new threats. The spatiotemporal distribution is central in the knowledge of the development, transmission, spread and dynamics of these diseases.

New technologies and GIS methods together with highly structured mathematical and statistical techniques have a special utility in describing and analyzing infectious disease incidence. Specifically, Bayesian inference methods allow the analysis of models with complex and flexible structures suitable to represent the diverse characteristics present in each geographical environment and disease.

Tuberculosis, hepatitis, HIV, influenza, malaria, dengue, zika and other vector-borne diseases are a constant concern for health authorities, practitioners and patients. A variety of environmental, climatic and socio-economic factors underlie their spatiotemporal patterns. In addition, factors such as changes in climate, habits or land use intervene and complicate the understanding of these processes.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, GEOBASE, EMBASE, Chemical Abstracts, and many other databases.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2020).
