Message from the Guest Editors

Dear Colleagues,

The inclusion of lived experience within mental health research has been prioritized in recent years, acknowledging the importance of person- and patient-centred research, particularly when it focuses on services and intervention. However, there is sometimes a lack of clarity around how best to be guided by the voices of lived experience when developing a study, and when translating findings to practice, as well as how to ensure participation is valid, valued, and safe. This Special Issue aims to explore the processes of, and findings from collaborative mental health research, including the voices of lived experience at all stages of the research. Studies grounded by how community members, participants/patients, services, and researchers collaborate within community- and clinical-based research are encouraged, especially as they pertain to co-creation and co-development. Papers examining the methodological processes of undertaking collaborative mental health research are also encouraged.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
