Message from the Guest Editors

Motor imagery tasks assess persons' ability to mentally activate motor representations in the absence of actual body actions. Training individuals to mentally simulate own limb movements can facilitate physical execution of the very same movements. For this reason, motor imagery, especially when combined with physical practice, can enhance motor performance in athletes as well as in people with different neurological conditions. In particular, in recent years, converging evidence has been demonstrating the effectiveness of motor-imagery-based rehabilitative programmes in rehabilitating people with spinal cord injury, children with developmental coordination disorder, or people with complex pain regional syndrome or low back pain.

Thus, further advancing knowledge about the mechanisms underlying motor imagery performance and training could represent a useful way to develop personalized and increasingly effective programmes for training of professional athletes and treating patients with sensorimotor disorders.

International Journal of *Environmental Research and Public Health*

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

Department of Biology, College of Science, Engineering and Technology, Jackson State University, 1400 Lynch Street, Box 18750, Jackson, MS 39217, USA

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and many other databases.

Journal Rank: JCR - Q1 (*Public, Environmental & Occupational Health*) / CiteScore - Q2 (*Public Health, Environmental and Occupational Health*)
