Message from the Guest Editors

The global pandemic resulting from the coronavirus outbreak (COVID-19) has fundamentally changed our lives.

Emerging evidence suggests that women have been disproportionately affected by COVID-19 economically, socially and environmentally. Women's lives and livelihoods continue to be significantly impacted with job losses, carrying the burden of unpaid care, increased isolation during pregnancy and post-partum, vulnerability to domestic and family violence and a heavy reliance on women in female-dominated vocations as frontline healthcare workers.

Regular participation in exercise, sport and physical activity infers substantial physiological, psychological and social benefits. Yet, globally, women are less active than men and face many complex barriers to exercise, including social, cultural, physical and psychological barriers. With COVID-19, previously existing and new barriers have further thwarted opportunities for women and girls to exercise.

It is necessary to separate the impacts of COVID-19 between men, women and where possible, across the gender spectrum, to inform what these impacts are and how we can best address these gender inequities.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
