Message from the Guest Editors

The dietary pattern approach is a recent focus in nutrition research as it seeks to understand the totality of the diet and considers the synergistic effects of multiple food and nutrient components. While considerable research related to dietary patterns in adults and various health outcomes have emerged, research devoted to dietary patterns in children and adolescents in relation to health and the development of diseases over time is still lacking. This gap needs to be addressed as childhood and adolescence together represent one of the most rapid, dynamic and formative phases of human development and a critical period that forms the foundation for establishing healthy lifestyle habits that can track to adulthood.

Deadline for manuscript submissions:

31 December 2021

International Journal of *Environmental Research and Public Health*

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and many other databases.

Journal Rank: JCR - Q1 (*Public, Environmental & Occupational Health*) / CiteScore - Q2 (*Public Health, Environmental and Occupational Health*)
