Message from the Guest Editors

Dear Colleagues,

Exposures in early childhood and through adolescent development set trajectories for risks of disease and illness in adulthood. Despite the importance of childhood exposures to lifelong health, they remain less studied and more poorly understood than adulthood exposures.

Countless attributes of childhood environments can impact lifelong health. Of particular interest are the effects of neighborhood socio-demographics, green spaces, fresh food availability, social services such as post offices and churches, street connectivity and walkability, and public transportation systems. Additional research in urban and rural settings and developing and developed countries will better guide policy efforts and planning for children's health.

This Special Issue is open to submissions that study how environmental exposures affect health from conception through childhood and young adulthood. Especially welcome are studies of the exposome—the combined effects of at least two exposures—and life-course epidemiology frameworks.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
